Assumptions and objectives of the course:			
The aim of the course is to learn the theoretical and practical design and operation of microprocessor-based systems. Student at the end of training should be able to design and program systems with micro-controllers.			
Study outcomes and reference to the educational results for a field of study

Assessment methods of study outcomes

Lecture: Assessment of the lecture is written exam of based on design case solution. Laboratory: Assessment of laboratory requires doing indicated exercises and giving reports.

Course description

The design and operation microprocessors. Basic types of microprocessor systems. Construction of microcomputer system. Elements associated with CPU: memory, address decoders. Principles of programming microprocessors. Sample microcontroller programming environment. Programming microprocessors. Microcontrollers and digital signal processors. MCU Peripherals: timers, counters, PWM circuits, other peripheral devices. Support for I/O devices. Interrupts and DMA system. Digital / analog and analog / digital. Principles of design of microprocessor systems. Coupling microprocessor systems with input elements and actuators. Communication buses used in microprocessor systems - standard SPI, I2C, 1-wire, USB. Debugging methods for microprocessor systems. Laboratory exercises illustrate the issues discussed during the lectures.

Basic bibliography:

1. Lecture materials provided by the teacher in electronic form.

- 2. Pont Michael J.: Embedded C, Addison-Wesley
- 3. Ball Stuart R ..: Embedded Microprocessor System, Newnes
- 4. First Steps with Embedded Systems. Byte Craft Limited

Additional bibliography:

Practical activities

1. Ball Stuart R ..: Analog Interfacing to Embedded Microprocessor, Newnes

2. Lipovski G. Jack: Introduction to Microcontrollers, Academic Press

3. Pont Michael J.: Programming Embedded Systems, University of Leicester
