Lectures

? Assessment of knowledge and skills proved on tests,

Laboratories:

? Tests and preemie of knowledge which is necessary to realize fundamental tasks in some fields of laboratory,

? Continuous assessment on each laboratory ? preemie of knowledge increase,

? Assessment of knowledge and skills connected to realization of laboratory tasks, assessment of report.

Course description

Sources of DC test voltage, AC (high voltage transformer) and pulse (Marx generator). Method of measurements of electrical properties, describing high voltage engineering, such as electrical strength (plate spark gap, spherical spark gap, cylindrical spark gap, sharp spark gar), resistance (Schering bridge), surfacial resistance, capacity (Schering bridge), partial discharge, dielectric losses factor (Schering bridge). Overvoltage protection (overvoltage factor, source of overvoltage, spares, attenuation of overvoltage waveform, overvoltage installations, touch voltage).

In frame of laboratory, following subjects are realized: measurements of electrical strength of plate spark gap, spherical spark gap, cylindrical spark gap, sharp spark gap; relationship between electrical strength of air and pressure; influence of space charge on electrical strength of air; surfacial breakdown; distribution on voltage on insulator; methods of measurements of high voltage; development of conductive bridge in oil; analysis of transformer oil.

Result of average student's workload

Activity	Time (working hours)		
1. Participation in lectures	15		
2. Participation in laboratories	30		
3. Participation in exam	3		
4. Preparation to exam	10		
5. Consultation	2		
6. Preparation to laboratories	15		
7. Preparation of laboratory reports	10		
Student's workload			

Source of workload	hours	ECTS
Total workload	85	3
Contact hours	50	2
Practical activities	55	1
