

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Metal Structures		Code 1010102121010113705
Field of study Structural Engineering Second-cycle Studies	Profile of study (general academic, practical) general academic	Year /Semester 1 / 2
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 15 Classes: 15 Laboratory: - Project/seminars: 15		No. of credits 4
Status of the course in the study program (Basic, major, other) major		(university-wide, from another field) from field
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 4 100% 4 100%
Responsible for subject / lecturer: dr inż. Katarzyna Rzeszut email: katarzyna.rzeszut@put.poznan.pl tel. 61 665 2097 Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 60-965 Poznań		Responsible for subject / lecturer: dr inż. Robert Studziński email: robert.studzinski@put.poznan.pl tel. 61 665 2098 Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 60-965 Poznań
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Has knowledge of structural mechanics and strength of materials in the area of structural engineering. Knows the basic design method of industrial halls. Presents the design issues of spatial steel truss structures.
2	Skills	Uses the design standards for structural analysis and dimensioning of steel structural elements, design structural elements of trusses in industrial buildings and bracing systems.
3	Social competencies	Understand the need for lifelong learning and knows how to interact and work in a group, taking the different roles.
Assumptions and objectives of the course: Gaining of knowledge and skills in design methods of frame buildings, cranes construction suspended structures, masts, towers, chimneys and thin-walled structures.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Familiar with basic principles of structural design concerning the cable structures as a roof - [K2_W02, K2_W14] 2. Knows design issues of structural elements susceptible dynamically: chimneys, towers and masts - [K2_W03, K2_W14] 3. Presents general principles and methods of structural analysis and design principles of thin-walled cold-rolled purlin cooperating with sheathing - [K2_W05, K2_W16]		
Skills:		
1. Uses the building standards for structural analysis and dimensioning of structures susceptible dynamically and thin walled - [K2_U03, K2_U04, K2_U07, K2_U14] 2. Able to design the components of towers, masts and suspension construction - [K2_U04, K2_U13, K2_U14] 3. Able to design thin-walled purlin restrained by sheeting - [K2_U03, K2_U14]		
Social competencies:		
1. Understand the need for lifelong learning; able to inspire and organize the learning process of others - [K2_K02, K2_K03] 2. Able to interact and work in a group, taking the different roles - [K2_K01, K2_K06] 3. Correctly identifies and resolves dilemmas associated to his profession - [K2_K07]		
Assessment methods of study outcomes		

<p>-evaluation of individual student projects combined with an oral defense of the thesis, content test in exercises (1 per semester - 1.5 hours) test in the lectures. (1 per semester - 1.5 hours) The evaluation scale: more than 100 excellent 91-100 very good (A) 81 - 90 good plus (B) 71 - 80 Good (C) 61 - 70 is sufficient plus (D) 51 - 60 satisfactory (E) insufficient under 50 (F)</p>		
Course description		
<p>Form of teaching: lecture Basic information on the structural design of structures susceptible dynamically: chimneys, towers and masts. Structural stability of steel portal frames. Principles of the location of the bracings in single-storey structures (single- or multi-bay). Design procedures of bracings according to EN1993-1-1: 2005+AC 2006. Rules for the production and design of cold-rolled construction. Issues of loss of stability of thin-walled elements in compression, bending and eccentrically-compressed. Global and local stability of thin-walled components axial compression, bending, eccentric compression. Ultimate and serviceability limit state and design methods for beams partially restrained by sheathing. Cable structures. Characteristics of the selected cable structures. Principles of the cable structure response. Elementary cable mathematics: load extension relationship, radius of circular arc, centenary loaded vertically, pre-stressed cable, two-way cable net. Two-dimensional tension structures: suspension bridges, draped cables, cable-stayed beams, cable trusses. Three-dimensional tension structures and surface stressed structures: cable truss systems, pneumatically-stressed, pre-stressed. Examples of the erected cable structures. Space structures. Wide-span space structures. Two-ways spacing trusses versus space deck systems. Structural load transmission at different grid density level. Design procedures and examples of the erected space structures. Form of teaching: classes Modeling and designing roofs, ceilings, towers and masts. Calculation algorithms thin-walled structures. Principles of design, construction and dimensioning thin-walled purlins and other elements of thin-walled structures. Structural solution of welded and bolted connections. Form of teaching: projects The project of thin-walled purlins restrained by sheathing.</p>

Result of average student's workload		
Activity	Time (working hours)	
1. Participation in lectures	15	
2. Participation in exercise classes	15	
3. Participation in design classes	15	
4. Complete (at home) works involved in the project	20	
5. Participation in the consultations of the exercise and design classes	10	
6. Preparing to the test in the field of lectures	20	
7. Preparing to the test in the field of exercise classes	15	
Student's workload		
Source of workload	hours	ECTS
Total workload	100	4
Contact hours	55	2
Practical activities	60	2
