STUDY MODULE DESCRIPTION FORM

Name of the module/subject **Building and Engineering Constructions**		Code **1010134241010110904**
Field of study **Environmental Engineering Extramural First-**	Profile of study (general academic, practical) **(brak)**	Year /Semester **2 / 4**
Elective path/specialty **-**	Subject offered in: **Polish**	Course (compulsory, elective) **obligatory**
Cycle of study: **First-cycle studies**	Form of study (full-time,part-time) **part-time**	
No. of hours Lecture: **15** Classes: **-** Laboratory: **-** Project/seminars: **10**		No. of credits **4**
Status of the course in the study program (Basic, major, other) **(brak)**	(university-wide, from another field) **(brak)**	
Education areas and fields of science and art **technical sciences**		ECTS distribution (number and %) **4 100%**

Responsible for subject / lecturer:

dr inż. Mariusz Gaczek
email: mariusz.gaczek@put.poznan.pl
tel. 616652481
Budownictwa i Inżynierii Środowiska
ul. Piotrowo 5, 60-965 Poznań

Responsible for subject / lecturer:

dr inż. Ewa Oleszkiewicz
email: ewa.oleszkiewicz@put.poznan.pl
tel. 616652107
Budownictwa i Inżynierii Środowiska
ul. Piotrowo 5 60-965 Poznań

Prerequisites in terms of knowledge, skills and social competencies:

1	**Knowledge**	Basis of mathematics
2	**Skills**	Elements of the theory of differential equations and integral calculations
3	**Social competencies**	Student is responsible for performed calculations

Assumptions and objectives of the course:

The main objective of mechanics and strength of materials course is to develope in the engineering student the ability to analyze a given problem in a simple and logical manner and to apply a few fundamental and well-understood principles. The student will be able to develope all the necessary formulas and to clearly indicate to conditions under which they can be safely applied to the analysis of design of actual engineering structures.

Study outcomes and reference to the educational results for a field of study

Knowledge:

1. Student knows the methods of determining internal forces in structural members - [-]
2. Student knows basic concepts and classification of materials used in engineering structures - [-]

Skills:

1. Student can determine internal forces in plane structures - [-]
2. Student can determine normal and shear stresses in various structural members - [-]
3. Student understands the basic concepts of stress, strain, deformation, and material behavior under different types of loading: axial, torsion, bending - [-]
4. Student can perform stress analysis and design of beams subjected to bending and shearing loads - [-]

Social competencies:

1. The student is aware of the responsibility that lies with the person conducting the structural calculations - [-]
2. The student uses a variety of computational methods to eliminate possible errors (check calculations) - [-]

Assessment methods of study outcomes

Exam in the form of a test: 15-20 questions.
Three control works - projects:
1. Properties of structural section
2. Internal forces in trusses, beams and frames
3. Beams design problems

Course description

Topics:
1.Basing principles of statics.
2.Properties of structural section - area, centroid, moment of inertia and product of inertia of plane area.
3.Basic assumptions and concepts in the theory of construction.
4.Structural elements and loading.
5.Internal forces.
6.Trusses, beams, frames and arcs.
7.Mechanical properties: elasticity, plasticity, buckling.
8.Strength, stiffness and stability conditions.
9.Stress-strain behavior.
10.Beams design problems.
11.Deformations of axial members.
12.Eccentric loading.
13.Statics.
14.Stresses in thin-walled tanks.

Result of average student's workload

Activity	Time (working hours)
1. Lectures	15
2. Projects	10
3. Preparation of examples	10
4. Preparation to an exam	13
5. Exam	2

Student's workload

Source of workload	hours	ECTS
Total workload	50	4
Contact hours	25	3
Practical activities	10	1
