STUDY MODULE DESCRIPTION FORM

Name of the module/subject		Code
Operation research and optimization theory		**1011102421011137646**
Field of study	Profile of study (general academic, practical)	Year /Semester
Logistics - Full-time studies - Second-cycle	**(brak)**	**1 / 2**
Elective path/specialty	Subject offered in:	Course (compulsory, elective)
Chain of Delivery Logistics	**Polish**	**obligatory**
Cycle of study:	Form of study (full-time,part-time)	
Second-cycle studies	**full-time**	

No. of hours				No. of credits
Lecture: **30**	Classes: **15**	Laboratory: **-**	Project/seminars: **15**	**4**

Status of the course in the study program (Basic, major, other)	(university-wide, from another field)
(brak)	**(brak)**

Education areas and fields of science and art	ECTS distribution (number and %)
technical sciences	**1 20%**
Technical sciences	**1 20%**
the sciences	**1 20%**
Mathematical sciences	**1 20%**
social sciences	**3 60%**
Economics	**3 60%**

Responsible for subject / lecturer:

dr Tomasz Brzęczek
email: tomasz.brzeczek@put.poznan.pl
tel. 61 665 33 92
Wydział Inżynierii Zarządzania
ul. Strzelecka 11 60-965 Poznań

Responsible for subject / lecturer:

dr Tomasz Brzęczek
email: tomasz.brzeczek@put.poznan.pl
tel. 61 665 33 92
Faculty of Engineering Management
ul. Strzelecka 11 60-965 Poznań

Prerequisites in terms of knowledge, skills and social competencies:

1	**Knowledge**	Student knows economic terms and management problems, esppecially operation management problems.
2	**Skills**	Student has Excel and computer skills. Makes basic operations of matrix algebra.
3	**Social competencies**	Student works in team and prepares project.

Assumptions and objectives of the course:

To develop skills of input-output modeling in management systems and optimization skills. To deliver knowledge about methods of management optimization and methods of estimation of an economic model.

Study outcomes and reference to the educational results for a field of study

Knowledge:

1. Student knows typical optimization problems in management, their objectives and constraints. - [K2A_W01]
2. Knows problems of production structure, mixture and schedulling. - [K2A_W09]
3. Knows allocation problems for tasks, resources, travel route and for transport plan problem. - [K2A_W09]
4. Knows optimization methods with continous and descrete variable and linear or non-linear function. - [K2A_W09]
5. Knows multi criteria optimization methods. - [K2A_W09]
6. Knows ordinary least squares method. - [K2A_W10]

Skills:

1. Student builds input-output model of economic system effectiveness. - [K2A_U01]
2. Uses optimization methods: graphical, simplex, graphs and transportation algorithm. - [K2A_U04,]
3. Student estimates or optimizes models with Excel, GRETL and Solver (inc. Solver Foundation). - [K2A_U07]
4. Uses multi criteria methods (aims hierarchy, metacriterion, fulfillment degre, AHP). - [K2A_U04]
5. Explains results of optimization models and uses them in management. - [K2A_U02]
Social competencies:
1. Student is aware of optimization benefits in management and planning. - [K2A_K03]
2. Spreads optimization in management problem solving. - [K2A_K05]
3. Can objectively assess and analyze data and solutions of management problems. - [S2A_K06]

Assessment methods of study outcomes
Formulating mark:
a) concerning exercises and lecture: on a basis of answers to questions about explained subjects b) concerning laboratory: assessment of proceeding in realisation of actual tasks
Ending mark:
a) concerning exercises and lecture: written test in theory and tasks
b) concerning laboratory: test in solving tasks with use of computer or team project ?Optimization problem solution in a chosen company?.
Course description
1. Clasification and modeling of decision tasks. Problems of production structure, mixture, resource division, transportation and tasks allocation.
2. Linear programming. Simplex and graphical method.
3. Multi-criteria continous programming. Metacriterion, objectives hierarchy.
4. Multi-criteria integer programming. Fulfillment degre, AHP.
5. Net programming. CPM ? critical path method. PERT-program evaluation and review technique.
7. Transportat optimization problem and Little algorithm.
8. Basics of nonlinear programming.
