

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Surface Phenomena and Industrial Catalysis		Code 1010702211010700639
Field of study Chemical Technology	Profile of study (general academic, practical) general academic	Year /Semester 1 / 1
Elective path/specialty Polymer Technology	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 30 Classes: - Laboratory: - Project/seminars: -		No. of credits 2
Status of the course in the study program (Basic, major, other) other		(university-wide, from another field) university-wide
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 2 100% 2 100%
Responsible for subject / lecturer: prof. dr hab. Elżbieta Frąckowiak email: elzbieta.frackowiak@put.poznan.pl tel. 61 6653655 Wydział Technologii Chemicznej ul. Berdychowo 4 60-965 Poznań		Responsible for subject / lecturer: prof. dr hab. inż. Krystyna Prochaska email: krystyna.prochaska@put.poznan.pl tel. 616653601 Wydział Technologii Chemicznej ul. Berdychowo 4 60-965 Poznań
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	A preliminary knowledge in surface and supramolecular chemistry is required; student should be familiar with nomenclature of interfacial processes (adsorption, absorption, etc.)
2	Skills	Student should be communicative in English and should be able to study proposed literature with understanding.
3	Social competencies	Student should realize the need of knowledge improvement.
Assumptions and objectives of the course: The course aims to provide knowledge of preparation, characterization and relevant applications of heterogeneous and homogenous catalysts and enzymes, the development of skills to select proper catalysts for specific processes and methodology of efficiency evaluation of catalysts. Moreover, students will become familiar with interpretation of experimental research results.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Student should be familiar with backgrounds of physical chemistry - [K_W02 ,K-W07]		
2. Student should be familiar with backgrounds of material chemistry - [K_W02 ,K-W07]		
3. Student should be familiar with backgrounds of chemical engineering - [K_W02 ,K-W07]		
Skills:		
1. Student should be familiar with chemical vocabulary in English - [-]		
Social competencies:		
1. Student understands the need for further education and improving the personal competences - [K_K01]		
2. Student can cooperate and work in a group, taking different roles - [K_K02]		
Assessment methods of study outcomes		
Examination tests after lecture.		
Course description		

Description and explanation of fundamental properties of various solids applied as heterogeneous catalysts. The focus is on interaction between reagent molecules and active centres of catalysts. Students will be introduced to modern spectroscopic techniques applied in characterization of structure and texture of the catalysts, their active centres, adsorbed molecules and interactions between them. Information on preparation of the catalysts and their applications in industry and environmental protection will be included.

Result of average student's workload

Activity	Time (working hours)
1. Lecture	30
2. Consultations to lecture	20
3. Self-education in the field	20
4. Solving a selected problem	10
5. Consultations to solving problem	10
6. Exam	2

Student's workload
