Name of		STUDY MODULE DI	ESCRIPTION FORM	
Name of the module/subject Construction Materials			Code 1010101121010110054	
Field of	study		Profile of study (general academic, practical)	Year /Semester
Civil	Engineering Fir	st-cycle Studies	(brak)	1/2
Elective	path/specialty	-	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of	study:		Form of study (full-time,part-time)	
First-cycle studies			full-time	
No. of h	ours			No. of credits
Lectur	e: 30 Classes	s: - Laboratory: 30	Project/seminars:	4
Status o	-	program (Basic, major, other) (brak)	(university-wide, from another field (br) :ak)
Educatio	on areas and fields of sci	ence and art		ECTS distribution (number and %)
technical sciences				4 100%
tel. 6 Facu ul. P	Piotrowo 5, 60-965 Po	onmental Engineering znań		
Prere	quisites in term	as of knowledge, skills and	subjects: mathematic, physics, cl	nemistry
1	Knowledge			
2	Skills	Ability to obtain information from information.	literature and other sources. Capa	ability to combine obtained
3	Social competencies	Understanding the need to conti Understanding the necessity of c	nue education throughout the pro co-operation and team work.	fessional career.
	competencies			fessional career.

Assessment methods of study outcomes

Lectures:

- oral or written exam,

- Laboratory classes:
- oral test of knowledge before the start of laboratory classes,
- written report after each laboratory class,
- final test after completing the classes.

Course description

Lectures

Basic information on the standardization of construction materials. Technical characteristics of building materials. General classification of building materials. Test methods. Durability of building materials. Stone materials. Aggregates (light, normal and heavy). Building ceramics/tiles. Wood. Biological corrosion of wood. Bitumens and waterproofing materials. Heat-insulation and sound-deadening materials. Metals. Binding materials. Common and special cement types, lime, gypsum. Basic information about plastics. Building glass. Attestation and control of the quality of building materials. Mortars. Preliminary information on designing concrete mixes.

Laboratory classes

Testing binders (the right amount of water in the cement paste, binding time, preparation of cement samples and determining the actual cement strength class after 28 days of curing, testing surface area), Study of natural and crushed aggregates (sieve analysis, bulk density in loose and compact state, shape indicator, content of dust). Testing ceramics (external characteristics, determining the strength class, basic disadvantages, testing flexural strength of tiles), Study of membranes (modified and oxidised), tensile strength, elongation at break, testing oxidised and modified bitumens (penetration, softening point). Testing plastics and rubber (flame analysis of plastics, determination of hardness, testing thickness of coatings/ paint, rubber abrasion).
