

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Structural Mechanics		Code 1010101131010110048
Field of study Civil Engineering First-cycle Studies	Profile of study (general academic, practical) (brak)	Year /Semester 2 / 3
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: First-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 15 Classes: 15 Laboratory: - Project/seminars: 15		No. of credits 5
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art		ECTS distribution (number and %)
Responsible for subject / lecturer: dr inż. Przemysław Wielentejczyk email: przemyslaw.wielentejczyk@put.poznan.pl tel. +48 61 665 2471 Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Basic knowledge of the following subjects: mathematics, theoretical mechanics, strength of materials covered during Civil Engineering or other similar type of studies up to the Bachelor of Science degree.
2	Skills	Capability to apply the acquired knowledge and obtain further information from the literature. One is capable to apply the theoretical knowledge to solve practical problems.
3	Social competencies	Awareness about necessity of expending the theoretical knowledge in order to justify its application during the professional career. Understanding the necessity of constant education.
Assumptions and objectives of the course: Theoretical background and knowledge of models in plane bar systems mechanics. Skill in calculation of internal forces and generalized displacements in statically determinate and indeterminate structures.. Influence lines of statical quantities in bar structures.		
Study outcomes and reference to the educational results for a field of study		
Knowledge: 1. Student knows the basic theorems and rules of linear structural mechanics. - [K_W03] 2. Student knows the relations between displacements and loads in statics of simple linear beams. - [K_W03] 3. Student knows methods of numerical models formation of arbitrary plane bar structures. - [K_W03]		
Skills: 1. Student can compute the distribution of internal forces and deformations of plane bar structures caused by arbitrary external loads, thermal and kinematic effects. - [K_U04] 2. Student is can determine influence functions of static quantities caused by moving loads. - [K_U04] 3. Student can make an appropriate choice of the calculation method of plane bar structures. - [K_U04, K_U06]		
Social competencies: 1. Student is capable to work individually as well as in the team - [K_K02] 2. Student is aware of the responsibility arising from the accuracy of obtained results and is able to provide the interpretation - [K_K02] 3. Student is aware of the necessity of constant education and knowledge expansion - [K_K10]		
Assessment methods of study outcomes		

<p>Written tests and exercises. The lectures will be summarised by written exam.</p> <p>1) Exam:(two terms: first one during the regular examination period, second during the last chance examination period) - each exam lasts 2,5 hours - each student receives test with individual and unique problems - the final mark is the summation of all the answers provided to the given problems, passing note in the scale 2= fail, 5= very good can be granted after obtaining at least 50% of the maximum amount of points</p> <p>2) Tutoring sessions:</p> <ul style="list-style-type: none"> - two written tests during the semester - each student receives the set of unique problems which must be solved and described individually (projects) -number of projects: 2 - during the tutoring sessions the individual help will be granted and the solving problems knowledge will be tested - final grade for each project will be based on the quality of the project as well as the result of the quiz - dates of each quiz will be set at the beginning of the semester 		
Course description		
<p>Models of structural systems. Statically determinate bar systems: internal forces, influence lines, displacements. Principle of virtual work, reciprocal theorems. Maxwell-Mohr formula. Statically indeterminate bar systems. Solution of frames, continuous beams, trusses by the flexibility method. Influence of generalized forces, temperature changes and support displacements. Influence lines of reactions, internal forces and displacements. Reduction theorems. Slope-deflection formulae for beams. Equations of kinematic chain. Stiffness method for kinematically indeterminate frames.</p>

Result of average student's workload		
Activity	Time (working hours)	
1. .Completing the project during tutoring sessions along with its elaboration	45	
2. .Preparation to the written tests and exam	35	
3. .Independent research of the available literature and solving additional problems	20	
Student's workload		
Source of workload	hours	ECTS
Total workload	125	5
Contact hours	40	2
Practical activities	80	3
