

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject District Heating and Gas Distribution		Code 1010134271010130285
Field of study Environmental Engineering Extramural First-	Profile of study (general academic, practical) (brak)	Year /Semester 4 / 7
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: First-cycle studies	Form of study (full-time,part-time) part-time	
No. of hours Lecture: 30 Classes: 10 Laboratory: - Project/seminars: 20		No. of credits 6
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 6 100% 6 100%
Responsible for subject / lecturer: dr hab. inż. Zbigniew Bagiński email: zbigniew.bagiński@put.poznan.pl tel. 61 665 25 24 Faculty of Civil and Environmental Engineering ul. Piotrowo 5 60-965 Poznań		Responsible for subject / lecturer: dr inż. Fabian Cybichowski email: fabian.cybichowski@put.poznan.pl tel. 61 665 24 14 Faculty of Civil and Environmental Engineering ul. Piotrowo 5 60-965 Poznań
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Fundamentals of combustion processes. Incompressible fluid flows in pipes, pressure loss, pump selection. Pressure, pressure units. Fundamentals of heat exchange. Strength of materials. Control systems.
2	Skills	Calculation of simple and complex hydraulic networks. Calculation of heat transfer through flat and curved walls. Selection of control equipment for hydraulic networks.
3	Social competencies	Ability to work in team. Awareness of the need to continually update and supplement one's knowledge and skills.
Assumptions and objectives of the course: To teach students basic information about municipal and industrial heat distribution systems, including: heat source, pipe line system, heat transfer unit. To teach students basic information about construction, operation and design of low and medium pressure natural gas distribution systems.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Student knows principles of operation of municipal and industrial heat distribution systems, based on conventional heat sources - [K_W04, K_W05]		
2. Student has the knowledge about construction, design and operation of: medium size boiler house (water and steam) and relevant pipe lines and heat transfer units - [K_W05,K_W06,K_W07]		
3. Student has the knowledge about design and operation of district heating systems including: heat source, pipe lines, heat transfer units - [K_W05,K_W06,K_W07]		
4. Student has the knowledge about construction, design, operation and control of low and medium pressure natural gas distribution systems - [K_W05,K_W06,K_W07]		
Skills:		
1. Student is able to calculate heat demand for medium size residential and industrial systems - [K_U13, K_U14]		
2. Student knows how to design medium size boiler house (water and steam) including control and safety systems - [K_U01, K_U04, K_U07, K_U13, K_U14]		
3. Student knows how to design and analyze heat distribution system, including: heat source, pipe lines, district heating substation, basic control equipment - [K_U01,K_U03, K_U07,K_U13, K_U14]		
4. Student knows how to design gas connection and low and medium pressure gas distribution system - [K_U04, K_U07, K_U13, K_U14]		
Social competencies:		

1. Student is aware of the purpose of municipal and industrial heat distribution systems - [K_K02, K_K]
2. Student understands the significance of team work in resolving theoretical and practical problems - [K_K03]

Assessment methods of study outcomes

Lecture: Written exam, possible additional oral exam

Excercise classes: written test

Seminars (design classes): evaluation of work progress during contact hours, presentation of finished design

Course description

Municipal heating systems - comparative analysis.

Heating demands calculations: Q_{ch} , Q_w , Q_{wh} , Q_t . Ordered chart of heat demands for heat source.

Fundamentals of boiler construction, operation and control for coal, oil and gas fired boilers.

Sizing and location of central heat source in a town.

District boiler houses: low and high temperature systems, technical diagrams, different control strategies for hydronic and capacity balancing, control and safety systems, auxiliary systems.

Distribution systems, low and high temperature systems, calculations, sizing, hydronic balancing, other practical considerations.

District heating substations: technical diagrams of substations in low and high temperature distribution systems, delivering heat for district central heating and domestic hot water systems, different control strategies for hydronic and capacity balancing, control and safety systems, auxiliary systems.

Pressure loss chart for heat station and district heating.

Medium pressure steam heat stations: example technical diagrams, control and safety systems, calculations and sizing of pipelines and equipment, other considerations.

Natural gas distribution systems: gas compressor stations, reduction and metering stations, pipelines, gas storage, connections, other considerations.

Example problems for design exercises (in small teams): designing district heating system for housing estate, including some public buildings. The system consist of boiler house, gas system connection, part of heat distribution system and example substation.

Result of average student's workload

Activity	Time (working hours)
1. Participation in lectures	30
2. Participation in seminars (design classes)	20
3. Participation in exercise classes	10
4. Additional consultations	10
5. Project preparation (work at home)	40
6. Preparation for exercise classes	15
7. Preparation for final tests	20

Student's workload

Source of workload	hours	ECTS
Total workload	145	6

Contact hours	70	3
Practical activities	65	3
