	STUDY MODULE D	ESCRIPTION FORM		
Name of the module/subject Application of micro	ollers in	Coc 101	^{de} 10325341010326094	
Field of study		Profile of study (general academic, practica (brak)	Profile of study (general academic, practical)	
Elective path/specialty		Subject offered in:		Course (compulsory, elective)
Measurement Systems in Industry and		Polish		obligatory
Cycle of study:		Form of study (full-time,part-time	e)	
Second-cycle studies		part-time		
No. of hours				No. of credits
Lecture: - Classe	es: - Laboratory: 18	Project/seminars:	18	4
Status of the course in the stud	y program (Basic, major, other)	(university-wide, from anothe	r field)	
	(brak)		(bra	ak)
Education areas and fields of so	cience and art			ECTS distribution (number and %)
technical sciences				4 100%
Technical sci	iences			4 100%
Responsible for sub	ject / lecturer:	Responsible for subj	ect /	lecturer:
dr inż. Arkadiusz Hulewicz email: arkadiusz.hulewicz@put.poznan.pl tel. 616652546 Wydział Elektryczny ul. Piotrowo 34.60-065 Poznań		dr inż. Michał Bołtrukiewicz email: michal.boltrukiewicz@put.poznan.pl tel. 616652032 Wydział Elektryczny ul. Piotrowo 3A 60-965 Poznań		
Prerequisites in terr	ns of knowledge, skills and	d social competencies	2.	-
1 Knowledge	Basic knowledge in the scope of Basic knowledge in the scope of digital systems.	e scope of electronics, including knowledge of electronic analog and		
2 Skills	Basis of programming languages Ability of the efficient self-educat controllers	jes ation in the area of programming of microcontrollers and PLC		
3 Social competencies	Awareness of the necessity of co	Awareness of the necessity of competence broadening and ability to show readiness to work as a team		
Assumptions and ob	jectives of the course:			
- Knowledge of programmin measurement techniques.	ng bases of the selected PLC control	olles and possibilities of the m	odern	8-bit microcontrollers for
- Knowledge of interdisiplina	ary achievements in the area of ind	ustrial applications of microco	ontrolle	ers and PLC controllers.
Study outco	omes and reference to the	educational results for	or a f	ield of study
Knowledge:				
1. Ability to describe the ap [K_W08 +++, K_W11 +, K_	plication range and potential of the W18 +]	modern measuring systems	-	
2. Ability to explain the prine applications - [K_W11 +]	ciples and techniques of the acquisi	tion and processing measurin	ng sigi	nals in the present industrial
Skills:				
1. Ability to design creativel into account the limitations	y the modern measurement system of the present status of knowledge	is, using possibilities offered I and technique - [K_U01 +]	by ava	ailable techniques, taking
2. Ability to work independe centers - [K_U02 +, K_U11	entiy and as a team in the design an	d construction companies, re	searc	n laboratories and industrial
Social competencies	5 .			
1. Understanding a need of systems used in industry ar	the broad popularization of the known biomedical engineering - [K_K02	wledge in the area of simple ++]	and c	omplex measurement
	Accordment method	te of study outcomes		

http://www.put.poznan.pl/

Laboratory exercises:

- initial tests and awarding the knowledge needed to solve problems given in the scope of laboratory tasks,
- continuous evaluation, at all classes, and awarding the skill increase in the use of the known principles and methods,
- evaluation of the knowledge and skills related to a given measuring the report prepared.

Projects:

- continuous evaluation, at all classes, and awarding the skill increase in the use of the known principles and methods,
- evaluation of the knowledge and skills related to a given group or independent project and evaluation of the prepared report.

Course description

- Construction of measuring systems with the use of PLC controllers.
- Languages of PLC controllers programming.
- Bases of programming, operations on data, signal processing, controllers communications.
- Examples of measurement systems configurations with a PLC controller.
- Application of microcontrollers in measurement systems.
- Internal architecture of microcontrollers.
- Internal I/O devices of microcontrollers.
- Configuration of a microprocressor system.
- Measurement applications with the use of internal I/O sources.
- Cooperation between a microcontriller with external devices.
- Languages of microcontroller programming: ASEMBLER and "C".

- Presentation of starting means, programming means for cooperation with microcontrollers, and network sources concerning the problems with microcontrollers.

Result of average student's workload

Activity	Time (working hours)
1. Participation in laboratory exercises	18
2. Participation in projects classes	18
3. Participation in consulting with lecturers	5
4. Preparation to laboratoryexercises and preparation of the reports	25
5. Realization of projects	30
6. Credit of projects	3
Student's workload	

Source of workload	hours	ECTS
Total workload	99	4
Contact hours	44	2
Practical activities	91	3
