

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Power networks and power system control		Code 1010314391010315992
Field of study Electrical Engineering	Profile of study (general academic, practical) (brak)	Year /Semester 5 / 9
Elective path/specialty Networks and Electric Power Systems	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: First-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: - Classes: - Laboratory: 9 Project/seminars: 9		No. of credits 2
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 2 100% 2 100%
Responsible for subject / lecturer: dr inż. Ireneusz Grządzielski email: ireneusz.grzadzieski@put.poznan.pl tel. 61 665 2635 (2392) Faculty of Electrical Engineering Piotrowo 3A, 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Possesses basic knowledge of the theory of electrical circuits, electrical machines, electric power engineering and electrical power generation
2	Skills	Has effective self-study ability in the domain of the chosen specialization, is able to integrate the knowledge acquired at the credited courses
3	Social competencies	Is aware of the need to develop his knowledge and competencies, is ready to undertake the cooperation and team work
Assumptions and objectives of the course: Getting knowledge of the electric power system operation under steady operating conditions, methods of simulation computations of the power flows in the HV and EHV meshed networks, market-based power flow optimization, computations of the symmetrical and asymmetrical steady short-circuit conditions in the power system, practical use of the power flow computation program (PLANS) and short-circuit computation program (SCC) applied by the PSE Operator.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Has general knowledge of automatics and automatic control fundamentals - know the criteria and principles of selection power protection automation devices - [K_W22++]		
2. Has knowledge of the electric power system fundamentals including structure and operation states of the electric power sectors: generation, transmission and distribution, knows basic rules of the operation and maintenance of the electric power system elements - [K_W24 +++]		
3. Has knowledge of the electric power engineering development trends in the EU integrated electric power system as well as rules of its safe operation - [K_W25++]		
Skills:		
1. Can elaborate the engineer task completion?s documentation and describe the task?s results - [K_U07++]		
2. Can choose suitable technique and use measuring equipment (analog or digital) to measure the basic measurable magnitudes typical for engineering - [K_U14+]		
3. Can properly use and maintain electrical devices according to the general requirements and technical docu - [K_U23+++]		
Social competencies:		
1. Is aware of the weight and understands different aspects and effects of the electric engineer?s activities including those related to the environmental impact and regarding the responsibility for the undertaken decisions - [K_K02++]		

Assessment methods of study outcomes		
<p>Laboratory:</p> <ol style="list-style-type: none"> 1. Test of the knowledge necessary to deal with problems posed in the lab tasks. 2. Assessment of the knowledge and skills related to the lab task completion, 3. Assessment of the task report. <p>Project:</p> <ol style="list-style-type: none"> 1. On-line assessment of the preparation to the design tasks, 2. Evaluation of the completed design task. 		
Course description		
<p>Laboratory: involves experiments carried out by using the power flow programs (PLANS) and short-circuit calculation programs (SCC) concerning issues presented in lectures- voltage and reactive power control, power flow control.</p> <p>Project: includes the design tasks from the scope of the knowledge handed over at the lectures in the year III in semester 6</p>		
<p>Basic bibliography:</p> <ol style="list-style-type: none"> 1. Kremens Z. , Sobierajski M. : Analiza systemów elektroenergetycznych. WNT, Warszawa, 1996. 2. Kacejko P., Machowski J.: Zwarcia w systemach elektroenergetycznych. WNT, Warszawa, 2002. 3. Poradnik Inżyniera Elektryka . t.3. WNT, Warszawa 2005 		
<p>Additional bibliography:</p> <ol style="list-style-type: none"> 1. Cegielski M.: Sieci i systemy elektroenergetyczne. PWN, Warszawa, 1979. 2. Kończykowski S., Bursztyński J.: Zwarcia w układach elektroenergetycznych. WNT, Warszawa, 1965. 		
Result of average student's workload		
Activity	Time (working hours)	
1. participation in labs	9	
2. participation in project classes	9	
3. participation in discussions related to labs	6	
4. participation in discussions related to project	6	
5. preparation to labs	10	
6. lab reports? elaboration	10	
7. preparing and drawing up a projects	15	
Student's workload		
Source of workload	hours	ECTS
Total workload	65	2
Contact hours	30	1
Practical activities	30	2
