

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Automatics and Automatic Control		Code 1010321331010314773
Field of study Electrical Engineering	Profile of study (general academic, practical) (brak)	Year /Semester 2 / 3
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: First-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 30 Classes: - Laboratory: 30 Project/seminars: -		No. of credits 5
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 5 100% 5 100%
Responsible for subject / lecturer: dr inż. Andrzej Kwapisz email: andrzej.kwapisz@put.poznan.pl tel. +48 616 652 559 Wydział Elektryczny ul. Piotrowo 3A 60-965 Poznań		Responsible for subject / lecturer: dr inż. Jacek Handke email: jacek.handke@put.poznan.pl tel. +48 616 652 559 Wydział Elektryczny ul. Piotrowo 3A 60-965 Poznań
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Has knowledge about mathematics and selected physics sections (optics, mechanics, electricity, magnetism). Has knowledge about signal theory and methods of its processing in time and frequency domain.
2	Skills	Is able to describe selected physical phenomena with mathematical apparatus
3	Social competencies	Is able to approve himself in new knowledge acquisition
Assumptions and objectives of the course: Getting knowledge about basic automatics components, automatic system and regulation, knowledge of regulator selection and its parameters adjustment for different types of regulation objects. Knowledge about synthesis methods and analysis of continuous automatic systems with application of different analytic methods and numerical modeling.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Has general knowledge about use and operation of automatic systems. - [K_W01 +++]		
2. Understands the principles and methods of mathematical modeling and practical application of automatic control systems - [K_W14 +++]		
Skills:		
1. Is able to identify basic automatic components and automatic control systems on the basis of its specific features. - [K_U01 +++]		
2. Is able to use software tools for research of automatic system features and it - [K_U09 +++]		
3. Is able to design and evaluate the results of a simple automatic control system operation - [K_U13 +++]		
Social competencies:		
1. Is aware of the significant impact of engineering and automatic control systems on the environment - [K_K02 ++]		
2. Understands the need for continuous professional development, personal and group cooperation - [K_K03 ++]		
Assessment methods of study outcomes		

<p>Lecture evaluation of the knowledge and skills on the basis of written tests, classroom activity rewarding.</p> <p>Laboratory: tests and written tests, evaluation of knowledge and skills related to the accomplishment practice task, evaluation of report from performed exercise.</p> <p>Obtainment of extra points for the activity in the classroom, in particular for: effectiveness of the application of acquired knowledge during studies, ability to work within a team performing the detailed practice task in the laboratory, contribution to the achievement of the tasks.</p>		
Course description		
<p>Basic concepts of control theory, the division of control systems. Mathematical description of linear control systems, transfer and spectral function, examples. Description of the control system state variables. Properties of the basic elements of automation. Time and frequency characteristics. Block diagrams of automatic control systems, flowchart conversion. Properties of regulators, tuning and examples. The stability of continuous linear systems, the general conditions of stability, algebraic and graphical criteria. Correction in control systems. Linear discrete systems, system stability. Nonlinear systems (static characteristics, dynamics analysis methods, examples). Quality of control, static accuracy, description of the properties of dynamic systems.</p>		
Basic bibliography:		
Additional bibliography:		
Result of average student's workload		
Activity	Time (working hours)	
1. participation in class lectures	30	
2. participation in laboratory classes	30	
3. participate in the consultations on the lecture	5	
4. participate in the consultations on the laboratory	5	
5. preparation laboratory reports	20	
6. preparation to the laboratory classes	7	
7. preparation of home work	7	
8. prepare for the completion of laboratory	4	
9. completion of laboratory classes	2	
10. prepare for the completion of class lectures	5	
11. completion of class lectures	4	
12. student's selfmanaged work	20	
Student's workload		
Source of workload	hours	ECTS
Total workload	137	5
Contact hours	74	3
Practical activities	95	2
