Prerec	uisites in term	s of knowledge, skills an	d social competencies:	
1	Knowledge	Student knows basic notions in calculus, set theory and logic.		
2	Skills	Student can operate a calculator, find and use proposed literature.		
3	Social	Student recognizes the necessit	Student	
	competencies	is conscious to operate in rational	classes.	
Assun	nptions and obj	ectives of the course:		
The aim		tatistical and probabilistic method	s and develop the ability to	use

Study outcomes and reference to the educational results for a field of study

Knowledge:

- Student has a basic knowledge of probability theory, including the rights of probability theory useful to solve practical engineering problems. - [K1A_W04]
- 2. 2. Student has a basic knowledge of mathematical statistics, including the methods of mathematical statistics useful to solve practical engineering problems. - [K1A_W04]
- Student knows the basic techniques and tools used to solve simple engineering tasks using information technology and computer support. - [K1A_W25]

Skills:

- Student can acquire, integrate, interpret information from literature, databases and other carefully selected sources, and to draw conclusions and formulate and justify opinions. - [K1A_U01]
- Student is able to use information and communication technology for the tasks of typical engineering activities. -[K1A_U07]
- Student is able to assess the usefulness of routine methods and tools to solve simple tasks of practical engineering, safety engineering characteristic and select and apply appropriate methods and tools and to use them effectively. [K1A_U15]

Social competencies:

Faculty of Engineering Management

- 1. 1. Student understands the necessity of continuous learning and knows the possibilities of further education (first-, second and third degree, postgraduate courses) and of improving professional, personal and social competence. Student is able to argue the necessity of continuous learning. [K1A_K01]
- 2. 2. Student is aware of their responsibility for their own work and is willing to obey the rules of collective work and to take responsibility for collaborative tasks. [K1A_K03]
- 3. 3. Student can see cause and effect relationship in achieving the set of goals and rank alternative or competitive tasks. [K1A_K04]

Assessment methods of study outcomes

Forming score:

- a) classes: on the basis of written tests, oral answers, solving exemplary tasks;
- b) lectures: on the basis of oral answers to questions about learned theoretical knowledge and solving practical examples. Summary score:
- a) classes: the average points obtained by the written tests or by the correction test test of total material;
- b) lectures: oral exam.

Course description

The basic concepts of probability will be discussed i.e.: probability space, random variables, elements of descriptive statistics, methods of statistical inference (estimation, hypothesis verification and analysis of correlation and regression).
