The students can interpret relationships occurring in the system of human-technical object,						, , , , ,			
1 Knowledge ergonomic design as well as occupational. The students can interpret relationships occurring in the system of human-technical object,	Prere	quisites in teri	ns of kno	wledge, skills	and s	ocial competencie	s:		
	1	Knowledge	The student has knowledge of ergonomics in technology, ecology, basics of diagnosing and ergonomic design as well as occupational.						
oliganize work that causes minimal workload ensures security.	2	Skills		The students can interpret relationships occurring in the system of human-technical object, organize work that causes minimal workload ensures security.					
3 Social The student is aware of the social role of a technical college graduate, and of predisposition to apply occupational safety principles.	3		to sometime	The student is aware of the social role of a technical college graduate, and of predispositions to apply occupational safety principles.					
Assumptions and objectives of the course: -Presenting the students a detailed knowledge of the theoretical and practical problems as well as methods of ergonomic		-	-						

-Presenting the students a detailed knowledge of the theoretical and practical problems as well as methods of ergonomic diagnosis occupational safety of a man. The use of diagnosis results in design. The knowledge and skills should allow the student to apply ergonomic diagnoses and occupational safety, in terms of adapting work to the capabilities of the human body, and suggesting the proposals for corrective action.

Study outcomes and reference to the educational results for a field of study

Knowledge:

- 1. Has extensive knowledge of recognizing the association of a certain problem to a given discipline. [[K2A_W01]]
- 2. Knows an in-depth characterization of dependencies within a given discipline. [[K2A_W02]]
- 3. Knows the definition of the subject and scope of the discipline. $\hbox{\tt [[K2A_W04]]}$
- 4. Knows the relationships between a given discipline and other disciplines. [[K2A_W06]]
- 5. Has a basic knowledge of the objects and organizational and socio-technical systems lifecycle. [[K2A_W16]]
- 6. Knows the basic dependencies that exist when solving simple engineering problems in the field of safety engineering. [[K2A_W19]]

Skills:

Faculty of Engineering Management

- 1. Can acquire, integrate, interpret data from literature, database or other properly matched sources, both in English or other foreign language accepted as an international language of communication within Safety Engineering, as well as to draw conclusions, formulate and justify opinions. [[K2A_U1]]
- 2. Can apply various techniques in order to communicate in occupational environment and other environments. [[K2A_U2]]
- 3. Has self-study ability and comprehends it [[K2A_U5]]
- 4. Student can apply information-communicative techniques to deal with tasks that are typical of engineering activity. [[K2A_U7]]
- 5. Is able to plan and carry out experiments, including measurements and computer simulations to interpret the results and draw conclusions. [[K2A_U8]]
- 6. Can, while formulating and solving engineering tasks, discern their systemic and non-technical aspects and also sociotechnical, organizational and economic approach. [[K2A_U10]]

Social competencies:

- 1. Understands the need and knows means how to self-study (first, second and third cycle studies, postgraduate studies, qualification courses)- improving professional, personal and social competence; can argument the need to learn for the whole life. [[K2A_K1]]
- 2. Student is fully aware of the responsibility that he has taken for his own work and expresses readiness to comply with the rules of team work as well as responsibility for mutually realized and completed tasks. [[K2A_K3]]
- 3. Can determine some causal relationships in the process of targets implementation and rank pertinence of alternative or competitive tasks. [[K2A_K4]]

Assessment methods of study outcomes

- Checking the knowledge before the laboratory exercises.
- Preparation of reports on activities.
- Final test

Course description

- -Living and working environment of a man. Technology as a source of occupational environmental risks to human.
- -The man- technology-environment system as an object of a diagnosis.
- -Diagnosing loads in the work environment.
- -Computer-aided diagnosis process of an occupational environment.

Basic bibliography:

- 1. Wejman M., Diagnozowanie środowiska pracy. Ćwiczenia laboratoryjne, Wyd. Politechniki Poznańskiej, Poznań 2012
- 2. Horst W.M., Diagnozowanie sposobu wykonywania pracy. Zagrożenia ergonomiczne, Wyd. Politechniki Poznańskiej 2012

Additional bibliography:

- 1. Normy, standardy i akty prawne wskazane na zajęciach.
- 2. Horst W.M., Wprowadzenie do diagnozowania sposobu wykonywania pracy. Wybrane zagadnienia fizjologii, biomechaniki i antropometrii, Wyd. Politechniki Poznańskiej 2012
