

<b>STUDY MODULE DESCRIPTION FORM</b>		
Name of the module/subject <b>Pro-quality Systems Engineering</b>		Code <b>1011105311011125143</b>
Field of study <b>Engineering Management - Part-time studies -</b>	Profile of study (general academic, practical) <b>(brak)</b>	Year /Semester <b>1 / 1</b>
Elective path/specialty <b>Quality Systems and Ergonomics</b>	Subject offered in: <b>Polish</b>	Course (compulsory, elective) <b>elective</b>
Cycle of study: <b>Second-cycle studies</b>	Form of study (full-time, part-time) <b>part-time</b>	
No. of hours Lecture: <b>10</b> Classes: <b>10</b> Laboratory: <b>-</b> Project/seminars: <b>-</b>		No. of credits <b>3</b>
Status of the course in the study program (Basic, major, other) <b>(brak)</b>		(university-wide, from another field) <b>(brak)</b>
Education areas and fields of science and art		ECTS distribution (number and %)
<b>Responsible for subject / lecturer:</b> dr Waldemar Prussak email: waldemar.prussak@put.poznan.pl tel. 61 665 34 64 Wydział Inżynierii Zarządzania ul. Strzelecka 11 60-965 Poznań		<b>Responsible for subject / lecturer:</b> dr inż Małgorzata Jasiulewicz-Kaczmarek email: malgorzata.jasiulewicz-kaczmarek@put.poznan.pl tel. 61 665 34 65 Wydział Inżynierii Zarządzania ul. Strzelecka 11 60-965 Poznań
<b>Prerequisites in terms of knowledge, skills and social competencies:</b>		
1	<b>Knowledge</b>	Student has a basic knowledge of systems theory, mathematical statistics, elements of the systemic approach to pro quality management
2	<b>Skills</b>	The student is able to discern system, technical, organisational and economic aspects of the pro quality management
3	<b>Social competencies</b>	The student is aware of the need for engineering development to pro quality systems
<b>Assumptions and objectives of the course:</b> The students are given the educational content relating to engineering aspects of pro quality systems, in particular as regards the quality assessment, the methods of the products? quality control level and critical points of process control as well as their supervision		
<b>Study outcomes and reference to the educational results for a field of study</b>		
<b>Knowledge:</b>		
1. Has knowledge of legal norms, standards and their impact on the organization - [K2A_W01, K2A_W12]		
<b>Skills:</b>		
1. Can discern systemic, non-technical, organisational, socio-economical and economical aspects - [K2A_U06]		
2. Can notice cause and effect dependences dealing with basic engineering problems that regard to quality management system objectives - [K2A_U06]		
3. Can characterize typical engineering tools in quality management - [K2A_U02]		
<b>Social competencies:</b>		
1. Can detect dependencies in terms of cause and effect consequences in the process of objectives implementation. He can also rank the alternative or competing tasks according to their relevance - [K2A_K03]		
2. Is aware of the interdisciplinary character of knowledge and skills that are needed to solve complex problems of an organization and a necessity to create interdisciplinary teams - [K2A_K06]		
<b>Assessment methods of study outcomes</b>		

<p>Formative assessment:</p> <ul style="list-style-type: none"> <li>- Classes: current assessment tasks solutions during the classes</li> <li>- Lectures: the current assessment of the participation in a discussion on the topics covered during previous lectures</li> </ul> <p>Collective assessment:</p> <ul style="list-style-type: none"> <li>- Written test (answers to open questions on the basis of the material covered during the lectures in 14-15 week of a semester)</li> <li>- Subject grade (lectures and classes combined) is an average of the grade from lectures and classes.</li> </ul>		
<b>Course description</b>		
<p>Analysis and risk assessment of the hazards and the effectiveness of the measures. Characteristics and components determining the quality of the products. Evaluation method of the quality level of products. Methods of technical control in the manufacturing process with particular emphasis on the use of resources. Analysis of critical control points and the selection of their supervision means. The use of statistical methods in engineering processes and elements of reliability theory</p>

<b>Result of average student's workload</b>		
<b>Activity</b>	<b>Time (working hours)</b>	
1. Lectures	15	
2. Classes	15	
3. Classes consultation	20	
4. Preparation for classes	30	
5. Preparation for an exam	20	
6. Final exam	2	
<b>Student's workload</b>		
<b>Source of workload</b>	<b>hours</b>	<b>ECTS</b>
Total workload	102	3
Contact hours	52	2
Practical activities	15	1
