Prere	equisites in term	s of knowledge, skills and	d social competencies			
1	Knowledge	Student knows economic terms and management problems, esppecially operation management problems.				
2	Skills	Student has Excel and computer	skills. Makes basic operation	ns of matrix algebra.		
3	Social	Student works in team and prepa	ares project.			
0	competencies					
Assu	mptions and obj	ectives of the course:				
		put modeling in management syst imization and methods of estimation		o deliver knowledge about		
	Study outco	mes and reference to the	educational results fo	r a field of study		
Know	vledge:					
		mization problems in managemen	t, their objectives and constra	ints [K2A_W01]		
	••••••	ction structure, mixture and schedu				
		s for tasks, resources, travel route		m [K2A_W09]		
4. Kno	ws optimization metho	ods with continous and descrete va	riable and linear or non-linea	r function [K2A_W09]		
5. Kno	ws multi criteria optimi	zation methods [K2A_W09]				
		ares method [K2A_W10]				
Skills	5:					
1. Stuc	lent builds input-outpu	t model of economic system effect	tiveness [K2A_U01]			
		s: graphical, simplex, graphs and t				
3. Student estimates or optimizes models with Excel, GRETL and Solver (inc. Solver Foundation) [K2A_U07]						
4. Uses multi criteria methods (aims hierarchy, metacriterion, fulfillment degre, AHP) [K2A_U04]						
		rizable econometric models with C				
		ation and econometric models and	d uses them in management.	- [K2A_U02]		
Socia	al competencies:					

- 1. Student is aware of optimization benefits in management and planning. [K2A_K03]
- 2. Spreads optimization in management problem solving. [K2A_K05]
- 3. Can objectively assess and analyze data and solutions of management problems. [S2A_K06]

Assessment methods of study outcomes

Exercises pass with mark from written test in theory and tasks.

Laboratory pass with mark from test in solving tasks with use of computer or team project ?Optimization problem solution in a chosen company?.

Course description

1. Estimation of linear and linearizable econometric models with OLS.

2. Clasification and modeling of decision tasks. Problems of production structure, mixture, resource division, transportation and tasks allocation.

3. Linear programming. Simplex and graphical method.

4. Multi-criteria continous programming. Metacriterion, objectives hierarchy.

5. Multi-criteria integer programming. Fulfillment degre, AHP.

6. Net programming. CPM ? critical path method. PERT-program evaluation and review technique.

7. Transportat optimization problem and Little algorithm.

8. Basics of nonlinear programming.
