Prer	equisites in term	is of knowledge, skills and	d social competencies:						
1	Knowledge	Knows the foundations of mathematics, physics. Understands the general principles of mechanics pavement. He knows the classification of roads broken down into its elements and understands the multifactorial nature of the pavement loadings. He knows the basic method of calculation of new pavements and those to be reinforced according to flexible, semi-rigid and rigid ones. He knows simple methods of dimensioning reinforcement of pavement structures.							
		Knows how to properly assess the pavement type and build its a simple model. He knows how to determine the material parameters of the individual layers of pavement structures and using any computer application licensed under the GNU GPL (or other) determine the state of stress in the characteristic points of the pavement model. Calculates the reinforcement for a simple model pavement and knows the simplified methods.							
2	Skills	to determine the material parame any computer application license in the characteristic points of the	he pavement type and build its eters of the individual layers of ad under the GNU GPL (or othe pavement model. 1. He can make the classification of simple and complex pavement structures - [K_U02]

2. He uses advanced specialized tools to find useful information, communication and acquisition of software to support the work of the designer roads $-[K_U05]$

3. He is able to correctly define alone the computational models of computer analysis of pavement structures - [K_U06]

4. Able to critically assess the results of the numerical analysis of engineering structures - [K_U07]

5. Can design the pavement reinforcement using the mechanistic approach - [K_U15]

Social competencies:

1. Alone complements and extends knowledge in the field of modern processes and technologies in pavements industry [K_K03]

2. He is aware of the need for sustainable development in the pavement construction industry - [K_K04]

3. Understands the need to inform the public knowledge about road construction - [K_K08]

Assessment methods of study outcomes

Knowledge is transmitted in the form of multimedia presentations and contact with the Students when discussing issues that require direct contact with the teacher. Examination of lectures is based on a term paper and takes the form of a written defense. The assessment consists of the sum of the points awarded for the work of the semester and a written test. Grading scale:

> 100 excellent

91 - 100 very good (A)

81 - 90 good plus (B)

71 - 80 good (C)

61 - 70 satisfactory plus (D)

51 - 60 satisfactory (E)

below 50 failed (F)

Course description

Introduction to the pavements analysis of different purposes: roadways, maneuvering squares, loading terminals, airports, pavements (Law basics, classification, technical conditions)

Definition, classification and loadings of pavements: mechanical, temperature, humidity

Determination of parameters for numerical models of pavements: laboratory methods and testing of in-situ

The testing of pavement model in the laboratory, the parameter EV2, evaluation of density (using VSS)

Analysis and interpretation of research results by VSS

GPR studies and their interpretation

Physics of the layered pavement system, the definition of aggressive environments for pavements

Life Cycle Cost Analysis

The chosen items of estimating the costs of pavements construction

Pavement structures failures (introduction to the understanding of the need to know the genesis of pavement defects)

Pavement mechanics (the elements of diagnosis and prognosis)

Modeling the pavement subgrades (practical issues)

Modeling the flexible pavement (practical issues)

The aspects of semi-rigid pavement reinforcing

Modeling the rigid pavement without the reinforcement

Rigid layers with reinforcement

Flooring - jointless pavement modeling
