

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Fundamentals of Bridge Engineering		Code 1010101151010120359
Field of study Civil Engineering First-cycle Studies	Profile of study (general academic, practical) (brak)	Year /Semester 3 / 5
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: First-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 30 Classes: 15 Laboratory: - Project/seminars: 15		No. of credits 4
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences		ECTS distribution (number and %) 4 100%
Responsible for subject / lecturer: dr inż. Iwona Jankowiak email: iwona.jankowiak@put.poznan.pl tel. 61 6475828 Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 61-138 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Knowledge of the strength of materials, structural mechanics, soil mechanics, concrete structures, steel structures, foundation design and fundamentals
2	Skills	Skills related to the static calculations and design of concrete and steel structures, self-learning skills
3	Social competencies	Ability to adapt of the type of any civil engineering structure to the communication requirements and social expectations, respect for the Polish language, understand the need for lifelong learning and group collaboration
Assumptions and objectives of the course: Understanding the terminology used to describe bridge structure. Understanding the structural elements of selected types of spans and bridge supports and their functions. Knowing selected loads used to calculate the bridge structures. Understanding of selected issues in the field of static calculations of bridge structures.		
Study outcomes and reference to the educational results for a field of study		
Knowledge: 1. Student knows the definitions of parameters characterizing the position and dimensions of bridge structures, he knows the names of components of structure and equipment of bridges and knows their functions - [K_W09] 2. Student knows the classifications of different types of bridge spans, their supports and equipment elements - [K_W09] 3. Student knows the permanent and moving loads appearing on bridges according to European standard PN-EN - [K_W06]		
Skills: 1. Student can name components of spans and supports of bridges and can describe every bridge using the correct terminology - [K_U01] 2. Student can draw: cross-section and longitudinal view of simple slab-beam bridge structure, as well as a abutment and a bridge intermediate support - [K_U01, K_U07] 3. Student is able to determine permanent and moving loads of bridge structure or part thereof - [K_U04]		
Social competencies: 1. Student can adapt the type of structure to the communication requirements and social expectations - [K_K08] 2. Student can collaborate and work together in a group, is aware of the need for self-education - [K_K01, K_K03] 3. Student complies with the principles of the Polish language and the rules of preparation of technical documentation - [K_K07]		

Assessment methods of study outcomes		
<p>Written test of the student's knowledge in the field of material presented during the lectures Written test of the student's knowledge in the field of material presented during the seminars Preparation of some static-strength calculation of simple road beam bridge (project) and oral test of knowledge of the range of this project</p>		
Course description		
<p>Lectures: Basic definitions, main elements of bridge structure, types and elements of bridge spans, types and element of bridge supports, bridge bearings, bridge span equipment, bridge structure dimensions, bridge classifications, permanent and moving loads on bridges, basic methods of bridge span and support analysis</p> <p>Seminars: static analysis of spans and bridge supports</p> <p>Projects: drawings of the cross-section and longitudinal and top views of the bridge, the selected static calculations of bridge structural elements</p>
