

<b>STUDY MODULE DESCRIPTION FORM</b>		
Name of the module/subject <b>Concrete Bridges</b>		Code <b>1010101161010120221</b>
Field of study <b>Civil Engineering First-cycle Studies</b>	Profile of study (general academic, practical) <b>(brak)</b>	Year /Semester <b>3 / 6</b>
Elective path/specialty <b>-</b>	Subject offered in: <b>Polish</b>	Course (compulsory, elective) <b>elective</b>
Cycle of study: <b>First-cycle studies</b>	Form of study (full-time, part-time) <b>full-time</b>	
No. of hours Lecture: <b>30</b> Classes: <b>15</b> Laboratory: <b>-</b> Project/seminars: <b>15</b>		No. of credits <b>5</b>
Status of the course in the study program (Basic, major, other) <b>(brak)</b>		(university-wide, from another field) <b>(brak)</b>
Education areas and fields of science and art		ECTS distribution (number and %)
<b>Responsible for subject / lecturer:</b>  dr hab.inż. Arkadiusz Madaj email: arkadiusz.madaj@put.poznan.pl tel. 61 647 5630 Faculty of Civil and Environmental Engineering 61-138 Poznań, Piotrowo 5		
<b>Prerequisites in terms of knowledge, skills and social competencies:</b>		
1	<b>Knowledge</b>	The basics of building statics and the strength of materials. The rules of loads determination. Knowledge concerning reinforced concrete theory and concrete technology.
2	<b>Skills</b>	Determination of ?influence lines? and inner forces. Determination of loads acting on constructions. Calculation of reinforced cross-sections concerning general structures. Preparation of constructional drawings.
3	<b>Social competencies</b>	The awareness of constant gaining knowledge. The ability to form ideas and communicate among the group. The proper use of polish language. Appropriate behavior.
<b>Assumptions and objectives of the course:</b> -Learning the basic features of materials used in concrete bridges. Learning general rules of calculation, design and building concrete bridges. The basics of strength calculations in concrete structures (reinforced concrete and prestressed concrete).		
<b>Study outcomes and reference to the educational results for a field of study</b>		
<b>Knowledge:</b>		
1. Features of materials used in concrete bridges - [K_W14] 2. Static systems of concrete bridges - [K_W08] 3. Basic methods of concrete bridges building and their influence on the design process - [K_W05] 4. The basics of strength calculation of concrete bridges - [K_W07]		
<b>Skills:</b>		
1. To determine a cross-section of a concrete bridge - [K_U07] 2. To determine the static system of a concrete bridge - [K_U07] 3. To carry out strength calculations of a concrete bridge - [K_U08]		
<b>Social competencies:</b>		
1. The awareness of constant gaining knowledge. - [K_K03] 2. The communication among the group in terms of communicational engineering. - [K_K01] 3. The ability to justify the chosen construction al solutions. - [K_K09]		
<b>Assessment methods of study outcomes</b>		
-Test at the end of auditory lessons. Constant verification of the project; oral defense of the project. Written exam (lectures).		

<b>Course description</b>		
-		
<p>General information about the rules of concrete bridges calculations and materials used in concrete bridges building. Static systems of concrete bridges. The determination of cross-sections and longitudinal shape of concrete bridges. Technology of realization and its influence on the inner forces distribution. The supports of concrete bridges. The rules of bearing determination in concrete spans. The rules of concrete bridges calculations, the calculations of span slabs, the determination of inner forces ? computational models of chosen static systems, calculation and forming of slab and girder concrete bridges with simple static systems. The basics of reinforced concrete and prestressed concrete design.</p>		
<b>Basic bibliography:</b>

<b>Result of average student's workload</b>		
Activity	Time (working hours)	
1. Participation in lectures	30	
2. Participation in design exercise classes	15	
3. Participation in exercise classes	15	
4. Self work on the project	15	
5. Literary study	10	
6. Preparation for the test	10	
7. Preparation for the exercise defence	10	
8. Preparation for the exam	20	
<b>Student's workload</b>		
Source of workload	hours	ECTS
Total workload	125	5
Contact hours	80	3
Practical activities	30	1
