Prerequisites

The student should have basic knowledge in biology, chemistry of organic compounds and chemical technology. Is able to obtain information from the indicated sources, correctly interprets them and draws conclusions.

Course objective

Transfer of knowledge to students on conducting biotechnological processes. Bioreactors and unit processes. The role of enzymes in biosynthesis, biodegradation and transformation processes. To familiarize students with the possibilities of practical use of microorganisms for the production of industrial compounds.

Course-related learning outcomes

Knowledge

1. Student has knowledge of complex biotechnology processes involving correct selection of materials, raw materials, apparatus and equipment applied in the processes of neutralization and recovery and planning of laboratory experiments and drawing up the acquired results – [K_W03]

POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

2. Student has knowledge of materials, raw materials, products and biotechnological processes – [K_W05]

3. Student has expanded knowledge about environmental protection associated with chemical processes and using their in a solving of biotechnological methods – [K_W08]

4. Student has an established expertise in the field of safety and health at work in biotechnology – [K_W10]

Skills

1. Student has skills to obtain the necessary information from the literature and other sources related to the biological sciences, the ability to link them with other sciences – [K_U01]

2. Student can independently determine the direction of further education – [K_U05]

3. Student is able to apply the acquired knowledge in order to develop a biotechnology process – [K_U11]

Social competences

1. Student understands the need for self-study and improve their professional competence – [K_K01]

2. Student is aware of the importance of microorganisms in the environment and biotechnological processes – [K_K02]

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lectures end with a written exam.

In the scope of laboratories - evaluation of work during the performance of experiments and written verification of knowledge necessary to conduct them.

Programme content

The course discusses issues related to the conduct of biotechnological processes and their use in various industries. The issues discussed in particular concern: the scientific basis of biotechnology and its divisions; obtaining microorganisms for biotechnological processes; methods of culturing microorganisms, raw materials in the biotechnology industry, microbiological and enzymatic bioreactors including membranes bioreactors, enzymatic biocatalysis and its industrial use, obtaining enzyme preparations. The use of biotechnology in environmental protection: bioremediation and composting, biofuels. Prospects for the development of biotechnology in chemistry. The use of biotechnology to obtain various compounds, e.g. organic acids, alcohols, biopolymers, etc.

In the scope of laboratory classes:

- 1. Basic processes in biotechnology
- 2. Macro and microscopic observations of microorganisms

POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

- 3. Preparation of microbiological preparations and structure of microorganisms
- 4. Conducting microbiological cultures
- 5. Enzymes and measurement of enzymatic activity
- 6. Isolation of bioactive compounds and natural dyes

Teaching methods

Lecture with multimedia presentation, discussion with students, practical laboratory classes
