

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Elements of Automation and Measurements in Chemical Technology

Course

Field of study

Chemical Technology

Area of study (specialization)

Level of study

First-cycle studies

Form of study

full-time

Year/Semester

III/6

Profile of study

general academic

Course offered in

English

Requirements

compulsory

Number of hours

Lecture

15

Laboratory classes

Tutorials

Projects/seminars

15

Other (e.g. online)

Number of credit points

2

Lecturers

Responsible for the course/lecturer:

Marek Ochowiak Eng, PhD, DSc

Responsible for the course/lecturer:

Prerequisites

As a preliminary requirement the student should have basic knowledge of chemical and process engineering, electronics and electrical engineering, construction and operation principles of process apparatus. He should also be able to analyze the obtained measurement data in the field of chemical technology and engineering as well as to perform mathematical calculations.

Course objective

Obtaining knowledge in the field of technological measurements, control and measuring apparatus in the chemical industry as well as elements of industrial automation and process control.

Course-related learning outcomes

Knowledge

1. Has knowledge in the field of automation and industrial metrology to the extent needed to formulate and solve simple computational tasks aimed at the selection of proper instrumentation. K_W5
2. Knows the basics of control and measurement systems and control systems. K_W6

3. Has knowledge about the control of quantities and technological processes as well as metrology in chemical technology and engineering. K_W6

Skills

1. Use the understanding of the indicated sources of knowledge (list of basic literature) and acquire knowledge from other literature sources. K_U1

2. Has the ability to present in the form of a presentation. K_U2, K_U4

3. The student is able to use knowledge to design and optimize automatic control systems and measuring systems. K_U8

Social competences

1. Understands the need for further training and improving their professional competences as well as teamwork. K_K1, K_K3

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: Egzam, additional presentation

Project: Project, presentation, oral and written answers

Programme content

As part of the classes, the following are discussed:

- Basic issues.
- Automatic adjustment systems.
- Adjustment and executive elements.
- The role of executive systems in industrial control systems.
- Regulators.
- Control stability and quality.
- Signaling, blockades and security.
- Measuring sensors.
- Measurements, measuring instruments and transducers.
- Control of quantities and technological processes in chemical technology and engineering.

Teaching methods

Multimedia presentation.

Bibliography

Basic

1. Piekarski M., Poniewski M.: Dynamika i sterowanie procesami wymiany ciepła i masy, WNT, Warszawa 1994.
2. Kostro J.: Elementy, urządzenia i układy automatyki, Wydawnictwa Szkolne i Pedagogiczne, Warszawa 2005.
3. Gawdzik A., Tabiś B., Figiel W., Zasady sterowania procesami technologii i inżynierii chemicznej. Politechnika Krakowska, Kraków 1991.

Additional

1. Ludwicki M., Sterowanie procesami w przemyśle spożywczym. PTTŻ Oddział Łódzki, Łódź 2002.

Breakdown of average student's workload

	Hours	ECTS
Total workload	50	2
Classes requiring direct contact with the teacher	35	1,2
Student's own work (literature studies, preparation for classes, preparation for egzam, project and presentation preparation) ¹	15	0,8

¹ delete or add other activities as appropriate
