

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Zielona chemia i recykling materiałów polimerowych (Green chemistry and recycling of polymeric materials)

	Course
Field of study	Year/Semester
Technologia chemiczna (Chemical Technology)	II/3
Area of study (specialization)	Profile of study
Technologia polimerów (Polymer Technology)	general academic
Level of study	Course offered in
Second-cycle studies	Polish
Form of study	Requirements
full-time	compulsory

		Number of hours
Lecture	Laboratory classes	Other (e.g. online)
15	0	0
Tutorials	Projects/seminars	
0	0	
Number of credit points		
2		

Lecturers	
Responsible for the course/lecturer: dr hab. inż. Dominik Pauksza	Responsible for the course/lecturer:
e-mail: Dominik. Pauksza@put.poznan.pl	
Wydział Technologii Chemicznej	
Instytut Technologii i Inżynierii Chemicznej	
ul. Berdychowo 4, 60-965 Poznań	

Prerequisites

Structured and systematic knowledge in the field of general, organic chemistry, polymers and chemical technology, and apparatus of the chemical industry. Ability to solve elementary engineering problems based on knowledge. Ability to obtain information from the indicated sources in Polish and a foreign language. Understanding the need for further education, understanding the need to expand their competences, readiness to cooperate within a team.

Course objective

Gaining knowledge about the impact of polymers on the environment in the context of false media reports. Understanding the methods of material recycling, material recovery and energy recovery of polymer materials. Principles of green chemistry in the context of recycling

Course-related learning outcomes

Knowledge

K_W2 - has expanded and in-depth knowledge in chemistry and other related areas of science, allowing to formulate and solve complex tasks related to chemical technology

K_W3 - has knowledge of complex chemical processes, including the appropriate selection of materials, raw materials, methods, techniques, apparatus and equipment for carrying out chemical processes and characterizing the products obtained

K_W11 - has a well-established and expanded knowledge of the selected specialty

K_W13 - has extended knowledge of advanced devices and apparatus used in chemical technology

Skills

K_U1 - has the ability to obtain and critically evaluate information from literature, databases and other sources, and formulate opinions and reports on this basis

K_U11 - is able to properly verify the concepts of engineering solutions in relation to the state of knowledge in technology and chemical engineering

K_U12 - has the ability to adapt knowledge of chemistry and related fields to solve problems in the field of chemical technology and planning new industrial processes

K_U15 - can critically analyze industrial chemical processes and introduce modifications and improvements in this area, using the acquired knowledge, including knowledge about the latest achievements of science and technology

K_U16 - has the ability to assess the technological suitability of raw materials and the selection of the technological process in relation to the quality requirements of the product

Social competences

K_K1 - is aware of the need for lifelong learning and professional development

K_K2 - is aware of the limitations of science and technology related to chemical technology, including environmental protection

K_K6 - can think and act in a creative and entrepreneurial way

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture - test

Programme content

Principles of green chemistry in the context of recycling. Basics of functioning of the recycling system. 3/4 R principle. Life cycle assessment (LCA), primarily with reference to packaging materials. Identification and sorting of plastics. Recycling of materials from the automotive and electrotechnical

industries. Reprocessing and recovery of tires and rubber waste. Agglomeration as a processing method used in material recycling. Methods of material recovery used for plastics. Energy recovery (combustion) of plastics, ecological aspects, combustion of plastics in the light of emissions of pollutants and dioxins. Material recycling, raw material recovery and energy recovery for specific types of polymers such as: polyethylene, polypropylene, polystyrene, polar polymers, polyurethanes, duroplastics and others. Legal aspects of material recycling and recovery of materials and energy from plastics. Tasks related to the design of technological lines for polymer processing and recycling.

Teaching methods

Lecture - multimedia presentation

Bibliography

Basic

1. „Recykling materiałów polimerowych”, A. K. Błędzki , WNT, Warszawa, 1997
2. „Podstawy recyklingu tworzyw sztucznych”, M. Kozłowski , Wydawnictwo Politechniki Wrocławskiej, Wrocław, 1998
3. Dzienniki Ustaw, Warszawa
4. „Plastics Fabrication and Recycling”, M. Chanda, S. K. Roy, CRC Press Taylor&Francis Group, 2008
5. “Plastics and the Environment”, A. L. Andrady, Wiley-Interscience, 2003
6. “Polymers, the Environment and Sustainable Development”, A. Azapagic, A. Emsley & I. Hamerton, J. Wiley et Sohns Ltd. 2003

Additional

1. Proceedings of the Central-European Conferences RECYCLING AND RECOVERY OF THE POLYMER MATERIALS, SCIENCE - INDUSTRY, Wrocław/Szczecin, 2000-2018.

Breakdown of average student's workload

	Hours	ECTS
Total workload	40	2,0
Classes requiring direct contact with the teacher	25	1,2
Student's own work (literature studies, preparation for passing) ¹	15	0,8

¹ delete or add other activities as appropriate
