

## COURSE DESCRIPTION CARD - SYLLABUS

Course name

Prefabrication methods - metody prefabrykacji

### Course

Field of study

Civil Engineering

Area of study (specialization)

IPB

Level of study

Second-cycle studies

Form of study

part-time

Year/Semester

II/3

Profile of study

general academic

Course offered in

język polski

Requirements

compulsory

### Number of hours

Lecture

10

Laboratory classes

Other (e.g. online)

Tutorials

Projects/seminars

### Number of credit points

1

### Lecturers

Responsible for the course/lecturer:

prof. dr hab.inż. Józef Jasiczak

Responsible for the course/lecturer:

### Prerequisites

The student should have knowledge of building materials and concrete technology, general construction, concrete, metal and wooden structures, broadly understood construction technologies.

### Course objective

The aim of the course is to show the latest achievements in the field of prefabrication of building elements and an overview of contemporary construction implementations at the construction site.

### Course-related learning outcomes

#### Knowledge

KB\_W05: knows in detail the currently used building materials and products, their properties and test methods, as well as the technologies of their production and assembly

#### Skills

KB\_U17: can obtain information and integrate it, make its creative interpretation and evaluation, draw conclusions, formulate and justify opinions on technologically advanced materials and structures

#### Social competences

KB\_K03: is ready to independently expand knowledge in the field of modern processes and technologies in construction

### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

The knowledge acquired during the lecture is verified on a final test at the end of the semester. The exam consists of three blocks of questions. Two are indicated by the examiner, one - to be chosen by the student. Passing threshold - 70%.

### Programme content

Lecture: evolution of concrete prefabricated construction technology - 1959 - 2020, methods of industrial production of concrete, steel and wooden prefabricated elements; prefabrication plants of the 70s and 21st century, technologies of production of selected groups of products for housing, public utility, industrial, communication, problems of transport and assembly.

### Teaching methods

Lecture: multimedia presentation + films from the implementation of selected objects.

### Bibliography

**Breakdown of average student's workload**

	Hours	ECTS
Total workload	25	1,0
Classes requiring direct contact with the teacher	10	0,5
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) <sup>1</sup>	15	0,5

<sup>1</sup> delete or add other activities as appropriate
