2. To acquaint the student with methods that enable geometric problems to solve some problems in the field of technical sciences.

### **Course-related learning outcomes**

#### Knowledge

have advanced knowledge of the principles of descriptive geometry and technical drawing, recording and reading architectural drawings, construction maps and geodetic maps, as well as the methods of preparing the maps both traditionally.

Skills

can imagine a spatial object based on its flat image and draw its axonometric projection.

Social competences take responsibility for the accuracy and reliability of work results and their interpretation

### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows: lectures: test during last classes; exercises: 2 x test + 1 x project.

#### **Programme content**

- 1. Projection of a point, a line and a plane on two perpendicular viewports.
- 2. Roof construction as an application of intersections of polyhedrons.
- 3. Intersections and developments of polyhedrons.
- 4. Conical constructions. Intersections and developments cones and cylinders.
- 6. Axonometry.

#### **Teaching methods**

lectures: a lecture with a multimedia presentation supplemented by examples given on a blackboard and presentation of the issues discussed;

exercises: tasks drawn on the board, individual drawing of tasks by students under the tutor's supervision.
