

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Electricity transmission

Course

Field of study

Power Engineering

Area of study (specialization)

Level of study

First-cycle studies

Form of study

part-time

Year/Semester

3/6

Profile of study

general academic

Course offered in

polish

Requirements

compulsory

Number of hours

Lecture

20

Laboratory classes

10

Other (e.g. online)

0

Tutorials

0

Projects/seminars

0

Number of credit points

4

Lecturers

Responsible for the course/lecturer:

dr inż. Krzysztof Szubert

email: Krzysztof.Szubert@put.poznan.pl

tel. 616652282

Wydział Inżynierii Środowiska i Energetyki

ul. Piotrowo 3A, 60-965 Poznań

Responsible for the course/lecturer:

dr inż. Bartosz Olejnik

email: Bartosz.Olejnik@put.poznan.pl

tel. 61 665 2581

Wydział Inżynierii Środowiska i Energetyki

ul. Piotrowo 3A, 60-965 Poznań

Prerequisites

Knowledge: Has basic knowledge of the theory of electric circuits, electromagnetic field, electric machines, high voltage techniques, power engineering and electricity generation

Skills: Has the ability to effectively self-study in a field related to the chosen field of study, combining knowledge acquired in the course of previously completed subjects.

Competences: Is aware of the need to expand their knowledge and competences, readiness to cooperate and cooperate in a group

Course objective

Acquaintance with the parameters and tasks of modern power systems, electricity transmission and

distribution subsystems. Construction of AC transmission systems. Impact of alternating current lines on the environment. Transmission of electricity by alternating current over long and short distances. The role of direct current transmission systems.

Course-related learning outcomes

Knowledge

Is able to explain the basic parameters and tasks of modern power systems.

Is able to characterize the basic principles of transmission of electricity over short and long distances, construction and construction of transmission lines, and possibilities of controlling energy transmission.

Skills

Explains the basic principles of functioning of modern power systems.

Is able to apply knowledge of the theory of electrical circuits and electrical machines to explain the basic phenomena associated with the transmission of electricity over short and long distances, make basic calculations related to the transmission of electricity.

Social competences

He understands the need and knows the possibilities of continuous training (second and third degree studies, postgraduate studies, courses), raising professional, personal and social competences.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lectures: assessment of knowledge and skills demonstrated in the written and oral exam, continuous assessment in class (rewarding activity and quality of perception).

Laboratory: assessment of knowledge and skills related to the exercise task at each class, evaluation of the report of the exercise.

Programme content

Lectures: Tasks and parameters of the power system. Electricity transmission and distribution subsystems. Hierarchical structure of the power network. Construction of AC transmission systems, contemporary development trends. Theoretical basis of AC transmission - wave phenomena, natural power. Measures to increase LV transmission capacity. Control of power flow in the transmission network. Direct current electricity transmission. Basics of designing AC transmission systems.

Laboratory: includes exercises in the field of analyzing phenomena occurring in transmission and distribution networks under normal and interference conditions using physical models.

Teaching methods

Lecture: multimedia presentation supplemented with examples given on the board

Laboratories: performing tests on physical or digital models

Breakdown of average student's workload

	Hours	ECTS
Total workload	100	4
Classes requiring direct contact with the teacher	40	2
Student's own work (literature studies, preparation for laboratory classes, preparation for tests/exam) ¹	60	2

¹ delete or add other activities as appropriate
