

COURSE DESCRIPTION CARD - SYLLABUS

Course name

The organization of the work of people with disabilities

Course

Field of study	Year/Semester
Safety Engineering	II/3
Area of study (specialization)	Profile of study general academic
Level of study	Course offered in polish
First-cycle studies	Requirements elective
Form of study full-time	

Number of hours

Lecture	Laboratory classes	Other (e.g. online)
15	30	
Tutorials	Projects/seminars	
15		

Number of credit points

6

Lecturers

Responsible for the course/lecturer:

dr hab. Eng. Marcin Butlewski

Responsible for the course/lecturer:

dr inż. Jarosław Gabryelski

Department of Ergonomics Applications

Phone: 605 883 000

Room: 361 Jacek Rychlewski 2

marcin.butlewski@put.poznan.pl

Prerequisites

The student has basic knowledge in the field of ergonomics adn work organisation

Course objective

The aim of the course is to learn the principles of organization of people with disabilities

Course-related learning outcomes

Knowledge

knows the issues of the life cycle of products, devices, facilities, systems and technical systems dedicated to special user populations such as people with disabilities

knows development trends and best practices in security engineering in the field of universal design

is able to correctly select the sources and information derived from them, assessing, critically analyzing and synthesizing this information regarding disability

can see in engineering tasks system and non-technical aspects as well as socio-technical, organizational and economic aspects regarding the employability of people with different levels of fitness

is able to prepare the necessary resources to work in an industrial environment and knows the safety rules associated with this work and is able to force their application in practice

Skills

can present, using properly selected means, a problem that falls within the framework of security engineering

is able to identify changes in requirements, standards, regulations and technical progress and the reality of the labor market, and based on them determine the need to supplement knowledge

Social competences

is able to see the cause-and-effect relationships in achieving the set goals and rank the importance of alternative or competitive tasks related to spending funds to improve jobs

is aware of the recognition of the importance of knowledge in solving problems in the field of security engineering and continuous improvement in the field of knowledge about job creation

is aware of the responsibility for own work and readiness to comply with the principles of teamwork and taking responsibility for jointly implemented tasks in the field of work organization

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Formative assessment of individual exercises and subsequent stages of projects presented to the teacher

Summative assessment - lecture test and project defense

Programme content

Disability in considering various sciences

The problem of efficiency and models for assessing functionality and efficiency

Classifications of disabilities and their use in practice

Design-oriented design approaches for people with disabilities - Universal Design, Immersive Design - inclusive,

Methods of counteracting disability problems at workplaces

The cohort approach and its practical use

Programs promoting the employment of persons with disabilities in Poland

Programs promoting the employment of people with disabilities in the world

Computer disability simulation models

During the exercises, practical examples of specific issues will be discussed

In the project, students will write the company's policy regarding the employment of people with disabilities and create tools that allow the company to solve problems in adjusting positions and structure. Projects take place based on the real problems of companies in the open and protected labor market as well as entities employing people with disabilities, such as foundations or WTZ - occupational therapy workshops.

Teaching methods

Lecture, discussion. Classical problem method, Case method, Discussions

Bibliography

Basic

Breakdown of average student's workload

	Hours	ECTS
Total workload	150	6,0
Classes requiring direct contact with the teacher	60	3,0
Student's own work (literature studies, preparation for classes/tutorials, preparation for tests/exam, project preparation) ¹	90	3

¹ delete or add other activities as appropriate
