

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Technical Rheology

Course

Field of study

Pharmaceutical Engineering

Area of study (specialization)

-

Level of study

First-cycle studies

Form of study

full-time

Year/Semester

3/5

Profile of study

general academic

Course offered in

polish

Requirements

compulsory

Number of hours

Lecture

15

Tutorials

0

Laboratory classes

15

Projects/seminars

0

Other (e.g. online)

0

Number of credit points

2

Lecturers

Responsible for the course/lecturer:

dr hab. inż. Jacek Różański

e-mail: Jacek.Rozanski@put.poznan.pl

tel. 61 665 2147

Responsible for the course/lecturer:

Prerequisites

Students starting this subject should have basic knowledge in mathematics, physics, chemistry, statistics, engineering graphics, fluid mechanics and materials technology. They should also have the ability to use spreadsheets, performing statistical analysis of measurement results and be ready to work in a team.

Course objective

1. Getting students with the basic knowledge of technical rheology, in particular with properties of non-Newtonian fluids and their microstructure, rheometry and methods of calculation of pressure loss.
2. Development of ability of perform rheological study and practical use of the results obtained from experiment.

Course-related learning outcomes

Knowledge

1. The student knows the basic concepts of rheology: dynamic, kinematic and extensional viscosity, flow and viscosity curves, Deborah number, classification of fluids - [K_W12]
2. The student knows the basic rheological properties of time-independent and time dependent fluids, viscoelastic fluids, magneto- and electrorheological fluids and methods of their mathematical description - [K_W12]
3. The student knows the theoretical basis of capillary and rotational rheometry, measurement methods of viscoelastic properties of fluid and extensional viscosity, advantages and disadvantages of the different measurement methods and principles of their selection - [K_W12]
4. The student knows the basic rheological properties of polymeric fluids, two-phase systems, and biomaterials used in the pharmaceutical industry - [K_W12][K_W21]

Skills

1. The student is able to select an appropriate measurement method for determining the rheological properties of the various fluids - [K_U08]
2. The student can perform rheological measurements using different methods - [K_U12]
3. The student is able to distinguish, based on the experimental studies, the rheological properties of various non-Newtonian fluids and to use appropriate mathematical rheological models to describe the flow curves - [K_U13]
4. The student is able to find relation between rheological properties of fluid and their application - [K_U12]

Social competences

1. The student understands the need to broaden their knowledge and skills due to the rapid advances in the chemical industry. He is aware that continuous training is a way to remain competitive in the labor market - [K_K8]
2. The student can independently and as a team perform various tasks. He is aware of the responsibility for their implementation within the team - [K_K2]

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Knowledge acquired during the lecture is verified during the exam. The exam consists of 5 open

questions for the same number of points and about 30 closed test questions. Minimum threshold: 50% points. Exam issues, on the basis of which questions are formed, will be sent to students by e-mail using the university e-mail system.

Skills and knowledge acquired as part of the laboratory are verified on a daily basis based on oral answers and 2 final tests, consisting of 30 test questions and 4-6 open questions for the same number of points.

Programme content

The course covers the following topics:

1. The elastic, viscous and viscoelastic response
2. Time as an additional parameter in characterizing material response
3. Simple shear of solids and fluids
4. Kinematic viscosity and dynamic viscosity
5. Non-Newtonian fluids: definition, the concept of a generalized Newtonian fluids, classification
6. Mathematical descriptions of flow curves of time-independent fluids
7. The interpretation of the phenomena of shear thickening and shear thinning
8. Yield stress fluids (microstructure and methods of determining yield stress)
9. Time-dependent fluids (thixotropy and anti-thixotropy)
10. First normal stress differences
11. Mechanical models of viscoelastic liquids (Maxwell, Kelvin, Burgers)
12. Characteristics of viscometers (gravitational capillary viscometers, orifice viscometers, falling ball viscometers)
13. Capillary rheometry - basic equations.
14. Rotational rheometry - basic equations.
15. Measurement methods of viscoelastic fluid properties
16. Rheological properties of polymeric fluids
17. Rheological properties of dispersed two-phase systems

Teaching methods

1. Lecture: multimedia presentation, illustrated with examples on the board.
2. Laboratory exercises: performing rheological measurements using viscometers and rheometers.

Breakdown of average student's workload

| | Hours | ECTS |
|--|-------|------|
| Total workload | 50 | 2,0 |
| Classes requiring direct contact with the teacher | 35 | 1,4 |
| Student's own work (literature studies, preparation for laboratory classes, preparation for tests/exam) ¹ | 15 | 0,6 |

¹ delete or add other activities as appropriate
