

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Polymeric Materials in Pharmacy - Performance Properties of Polymeric Materials Used in Pharmacy

Course

Field of study

Pharmaceutical Engineering

Area of study (specialization)

-

Level of study

First-cycle studies

Form of study

full-time

Year/Semester

3/5

Profile of study

general academic

Course offered in

polish

Requirements

elective

Number of hours

Lecture

0

Tutorials

0

Laboratory classes

15

Projects/seminars

0

Other (e.g. online)

0

Number of credit points

1

Lecturers

Responsible for the course/lecturer:

dr hab. inż. Arkadiusz Kloziński

e-mail: arkadiusz.klozinski@put.poznan.pl

tel. 61 665 37 84

Wydział Technologii Chemicznej

ul. Berdychowo 4, 61-131 Poznań

Responsible for the course/lecturer:

Prerequisites

The student has knowledge of the basic issues of general chemistry, organic chemistry, materials science and machine science. The student knows and applies good working techniques in the chemical laboratory, is able to operate research equipment. Is able to obtain information from literature, databases and other properly selected sources.

Course objective

Transfer of practical knowledge of measuring techniques used to assess the performance of polymeric materials of greatest importance in the pharmaceutical industry.

Course-related learning outcomes

Knowledge

1. The student has knowledge of selected issues regarding the assessment of the performance of polymeric materials used in pharmaceutical engineering. [K_W3].
2. The student has a basic knowledge of the construction and operation of apparatus in the field of assessment of the performance of polymeric materials used in the pharmaceutical industry and related industries. [K_W18]

Skills

1. The student, based on general knowledge, explains the basic phenomena associated with the functional properties of polymeric materials. [K_U2]
1. The student is able to assess the performance of polymeric materials used in pharmaceutical engineering. [K_U14]

Social competences

The student is ready to critically assess their knowledge, understands the need for further education, supplementing their field knowledge and raising their professional, personal and social competences, understands the importance of knowledge in solving problems and is ready to seek expert opinions. [K_K1]

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

1. Evaluation of knowledge from laboratory exercises based on oral and written answers.
2. Evaluation of the laboratory report.

Programme content

The laboratories aim to provide students with theoretical and practical knowledge from the techniques of measuring the performance of polymeric materials used in the pharmaceutical industry. Students learn about the technique of measuring static extension, assessment of processing and rheological properties of polymeric materials and assessment of the effect of temperature on the performance of polymeric materials

Laboratory exercises will include:

1. Preparation and mechanical properties of polymer materials
2. Rheological properties of polymeric pharmaceutical materials
3. The effect of temperature on the performance of polymeric materials.

Teaching methods

Laboratories - practical exercise.

Bibliography

Basic

1. T. Broniewski: „Metody badań i ocena właściwości tworzyw sztucznych”, WNT W-wa 2000.
3. W. Dzierża, T. Czerniawski: „Właściwości mechaniczne i termiczne polimerów”, Wyd. UMK, Toruń 2000.

Additional

1. H. Saechtling: „Tworzywa sztuczne. Poradnik”, WNT Warszawa 2000.

Breakdown of average student's workload

	Hours	ECTS
Total workload	25	1,0
Classes requiring direct contact with the teacher	15	0,6
Student's own work (literature studies, preparation for laboratory classes) ¹	10	0,4

¹ delete or add other activities as appropriate
