dr inż. Ryszard Mańczak

Responsible for the course/lecturer: dr inż. Jakub Kowalczyk

Prerequisites

Student has basic knowledge of mathematics and physics

Course objective

Getting to know the basic of theoretical and practical of the operation of DC and AC circuits as well as the construction and operation of selected electrical machines.

Course-related learning outcomes

Knowledge

The student has extended and in-depth knowledge of physics useful for formulating and solving selected technical tasks, in particular for correct modeling of real problems.

The student has ordered and theoretically founded general knowledge in the field of key issues of technology and detailed knowledge in the field of selected issues in this discipline of transport engineering

Skills

Student is able to make a critical analysis of the functioning of transport systems and other technical

solutions and to evaluate these solutions, including: is able to effectively participate in the technical inspection and assess the transport task from the point of view of non-functional requirements, has the ability to systematically conduct functional tests.

The student is able to design elements in the field of transport engineering and construct simple machines.

Social competences

The student is aware of the importance of knowledge in solving engineering problems, knows examples and understands the causes of malfunctioning transport systems that have led to serious financial and social losses or to serious loss of health and even life.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows: Exam at the end of the semester.

Programme content

Basic of DC electric circuits (basic concepts, linear and nonlinear elements, Ohm's law, Kirchhoff's laws, methods of circuit solving, work, power, energy).

Basic of electric circuits of alternating current (basic concepts, generating alternating current, Ohm's law and Kirchhoff's laws, vector and time graphs, work, power, energy).

Transformers - structure and operation.

Electric motors - structure and operation.

Measuring instruments and electrical measurements.

Teaching methods

Auditorium lecture
