

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Humanistic and social subject II: Economics in electrical power engineering

Course

Field of study

Electrical power engineering

Area of study (specialization)

-

Level of study

Second-cycle studies

Form of study

full-time

Year/Semester

2/3

Profile of study

general academic

Course offered in

Polish

Requirements

elective

Number of hours

Lecture

30

Laboratory classes

0

Other (e.g. online)

0

Tutorials

0

Projects/seminars

0

Number of credit points

2

Lecturers

Responsible for the course/lecturer:

Justyna Michalak Dr. Eng.

Responsible for the course/lecturer:

Faculty of Environmental Engineering and
Energy

Institute of Electric Power Engineering

e-mail: justyna.michalak@put.poznan.pl

tel. 61 665 2030

Prerequisites

The student has a knowledge of the basics of financial management in energy companies. Has a knowledge of the basics of entrepreneurship, the market functioning and the market economy. Student knows the static and dynamic (discount) methods for assessing the profitability of energy projects. Is able to use the known methods to solve tasks related to the assessment of the economic efficiency of an investment. Student knows the subject of risk in the energy sector and the methods of its analysis.

Course objective

Getting to know the market values of power plants and combined heat and power plants.

Understanding an energetic and economic efficiency of modernization the energy facilities.
Understanding the economical aspects of distributed electricity and heat generation.

Course-related learning outcomes

Knowledge

1. The student has knowledge of the market value of energy companies.
2. The student has knowledge of energetic and economic efficiency regarding modernization of the energy facilities.
3. Student has knowledge of the economic aspects of a distributed energy generation.

Skills

1. The student is able to determine the market value of power plants and combined heat and power plants.
2. The student is able to estimate the economic efficiency of modernized energy facilities.
3. The student is able to determine the cost of transmission and distribution of energy.

Social competences

The student is aware of the critical assessment and analysis of issues related to modernization of energy facilities and distributed generation.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture

1. Assessment of the knowledge and skills shown in the written test.
2. Continuous assessment during each class - rewarding activity.

Programme content

Lecture

Market value of power plants and combined heat and power plants. Energetic and economic efficiency of power plants and combined heat and power plants modernization. Technical and economic analysis of power grid systems. Costs of transmission and distribution of energy. Capital cost. Economic aspects of electricity distribution and heat generation. Unit cost of electricity generation. Sources of financing for investment projects. Types of external financing sources. Companies. Taxes.

Teaching methods

Lecture with multimedia presentation

Bibliography

Basic

Breakdown of average student's workload

	Hours	ECTS
Total workload	55	2,0
Classes requiring direct contact with the teacher	30	1,0
Student's own work (literature studies, preparation for test) ¹	25	1,0

¹ delete or add other activities as appropriate
