

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

COURSE DESCRIPTION CARD - SYLLABUS

Course name Quality Engineering 2

Course

Field of study Safety Engineering Area of study (specialization)

Level of study First-cycle studies Form of study part-time Year/Semester 3/6 Profile of study general academic Course offered in Polish Requirements compulsory

Number of hours

Lecture	Laboratory classes	Other (e.g. online)
10		
Tutorials	Projects/seminars	
12	12	
Number of credit points		
Δ		

Lecturers

Responsible for the course/lecturer: Ph. D., Eng. Anna Mazur Mail to: anna.mazur@put.poznan.pl Phone: 616653364 Faculty of Engineering Management ul. J. Rychlewskiego 2, 60-965 Poznań Responsible for the course/lecturer:

Ph. D., D.Sc., Eng. Małgorzata Jasiulewicz-Kaczmarek, University Professor

Mail to: malgorzata.jasiulewiczkaczmarek@put.poznan.pl

Phone: 616653365

Faculty of Engineering Management

ul. J. Rychlewskiego 2, 60-965 Poznań

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

Prerequisites

Knowledge and skills related to engineering aspects of the quality of products, processes and systems. Knowledge of quality management tools that can be used in various aspects related to security issues.

Course objective

Providing students with knowledge and skills related to engineering aspects of pro-quality systems. Acquainting students with the essence of normalization and standardization, indicating links with selected pro-quality systems in relation to systems and products. To familiarize students with selected methods of quality engineering.

Course-related learning outcomes

Knowledge

The student knows issues related to normalization and standardization in the area of process, product and system quality engineering. He knows the assumptions and requirements of selected pro-quality systems, including ISO 9001: 2015 [P6S_WG_07].

Skills

The student is able to use appropriate methods and techniques to design selected elements of the quality management system according to the requirements of ISO 9001: 2015 [P6S_UW_07].

The student is able to plan and carry out experiments related to the application of selected methods of quality management, is able to interpret the results and draw conclusions [P6S_UO_01].

Social competences

Student dostrzega zależności przyczynowo-skutkowe, potrafi określać priorytety dążąc do postawionych celów w realizowanych zadaniach i projektach [P6S_KK_01].

Student ma świadomość znaczenia wiedzy z obszaru inżynierii jakości w rozwiązywaniu problemów związanych z inżynierią bezpieczeństwa, jest świadomy konieczności ciągłego doskonalenia [P6S_KK_02].

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows: Tutorials:

Formative assessment: ongoing assessment of the tasks performed. For each task the student receives points, completing the task - at least 50% of points

Summative assessment: the sum of points obtained from individual tasks is converted into a grade

Design:

Formative assessment: assessment of the current progress of the project stages. For each stage of the project, the Student receives a certain number of points. Each stage must be passed at a minimum of 51%.

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

Summative assessment: the assessment is the sum of the points obtained for all stages of the project. Passing threshold 51%

Lecture:

Formative assessment: answers to questions about the content of previous lectures,

Summative assessment: Test of the knowledge provided during the lectures, scored on a two-point scale 0, 1. Passing point: 50% of points.

Programme content

Lecture: Normalization and standardization in quality engineering. Principles of quality management. Pro-quality systems related to the functioning of the organization. Quality management system acc. To ISO 9001: 2015 - selected elements.

Tutorials: Quality management methods used in quality engineering of processes, products and systems. Application of quality function expansion to solving problems related to safety engineering. FMEA method process - application in the areas of safety engineering. Quality plan - a method of designing, monitoring, supervising and improving processes.

Project: Selected elements of the quality management system according to ISO 9001: 2015. Practical application of the principles of quality management. The context of the organization. Analysis of the company's surroundings and design of the quality policy. Determining the scope of the quality management system. Business process map. Process documentation templates. Basics of the risk-based approach.

Teaching methods

Lecture: information lecture, problem lecture, work with a book, lecture.

Tutorials: problem lecture, lecture with explanation and explanation, case study, brainstorming

Project: case study, brainstorming, project method
