COURSE DESCRIPTION CARD - SYLLABUS

Course name

Strength of Materials

Course

Field of study

Engineering Management

Area of study (specialization)

Level of study

First-cycle studies

Form of study

full-time

Year/Semester

2/3

Profile of study

general academic

Course offered in

English

Requirements

compulsory

Number of hours

Lecture

30

Laboratory classes

15

Other (e.g. online)

Tutorials

15

Projects/seminars

Number of credit points

4

Lecturers

Responsible for the course/lecturer:

Ph.D., Eng., Piotr Stasiewicz

Mail to: piotr.stasiewicz@put.poznan.pl

Phone: 61 665 2044

Faculty of Engineering Management

ul. Piotrowo 3, 60-965 Poznań

Responsible for the course/lecturer:

Prerequisites

Solving basic tasks in geometry and mathematical analysis.

Ability to search for necessary information in literature, databases, catalogues. The ability to self-study.

Using information and communication techniques appropriate to carry out engineering tasks.

Course objective

Introduction to the basic principles of mechanics of deformable bodies.

Course-related learning outcomes

Knowledge

1.has basic knowledge about the principles of design and operation of machines [P6S_WG_14]

2. has knowledge about the properties of materials used in mechanical engineering [P6S_WG_16]

Skills

1. can solve a simple design task [P6S_UW_14]

2. can design a part or subassembly of the machine [P6S_UW_16]

3. can carry out measurements of mechanical properties of materials [P6S_UW_15]

Social competences

1. is aware that machine design requires a system approach [P6S_KO_02]

2. understands the need for lifelong learning [P6S_KK_01]

3. is aware that engineering activities affect the environment [P6S_KR_01]

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture, tutorials - written test and assessment of activity in the classroom:

3 50.1% -70.00%

4 70.1% -90.0%

5 from 90.1%

Laboratory classes - ongoing control of theoretical preparation for classes, discussion of results, substantive assessment of test reports.

Programme content

Equations of static equilibrium

Classification of loads acting on an elastically deformable body, stresses and internal forces. Internal forces in the bar.

Tests of mechanical properties of materials.

Tension and compression. Strength conditions, generalized Hooke's law.

Tension and compression within the limits of elasticity, the statically determinate and indeterminate bar systems.

Moments of inertia of flat figures.

Torsion of round bars.

Graphs of bending moments and shear forces. Bending of beams.

Normal stresses in beams.

Beam Design. Differential equation for beam deflection lines and beam deflection lines.

Strength theories.

Bars and beams subject to combined loadings. Simultaneous stretching or compression with bending, core cross-section. Bending with torsion.

Program content of laboratory classes: tensile test, hardness measurements using Brinell, Vickers, Poldi, Rockwell methods, fatigue tests, impact bending test, spring characteristics, strain gauges tests.

Teaching methods

Live lecture with multimedia illustrations, tutorials with problems solved on the board, laboratories - measurements performed by students under the supervision of a teacher.

Bibliography

Basic

1. M. Ostwald, Podstawy wytrzymałości materiałów i konstrukcji, WPP, Poznań 2017

2. J. Zielnica, Wytrzymałość materiałów, str. 554, WPP, wyd. III, Poznań 2000

Additional

1. N. Willems, T. J. Easley, S. T. Rolfe, Strength of Materials, Mc Graw-Hill Book Company, 1981

2. M. Gere, S. Timoshenko, Mechanics of Materials, PWS-Kent Publishing Company, Bos-ton, 1984

Breakdown of average student's workload

	Hours	ECTS
Total workload	100	4,0
Classes requiring direct contact with the teacher	60	2,5
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests) [1]	40	1,5

[1] delete or add other activities as appropriate
