

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Quality management

Course

Field of study

Management Engineering

Area of study (specialization)

Level of study

First-cycle studies

Form of study

full-time

Year/Semester

3/5

Profile of study

general academic

Course offered in

English

Requirements

compulsory

Number of hours

Lecture

15

Tutorials

15

Laboratory classes

Projects/seminars

15

Other (e.g. online)

Number of credit points

4

Lecturers

Responsible for the course/lecturer:

Ph.D., D.Sc., Eng. Małgorzata Jasiulewicz-Kaczmarek, University Professor

Mail to: malgorzata.jasiulewicz-kaczmarek@put.poznan.pl

Phone. 61 665 33 65

Faculty of Engineering Management

ul. J. Rychlewskiego 2, 60-965 Poznań

Responsible for the course/lecturer:

Ph.D., Eng. Anna Mazur

Mail to: anna.mazur@put.poznan.pl

Phone. 61 665 33 64

Faculty of Engineering Management

ul. J. Rychlewskiego 2, 60-965 Poznań

Prerequisites

Basic knowledge of technical issues, statistics and work organization

Course objective

Acquiring knowledge and skills related to engineering aspects of product and process quality, in particular regarding quality evaluation, methods of product quality control as well as critical process control points and their supervision

Course-related learning outcomes

Knowledge

1. Student has basic knowledge about the life cycle of industrial products including machinery and related quality issues [P6S_WG_14; P6S_WG_15]
2. Student knows the basic methods, techniques and tools used in quality engineering in relation to typical industrial technologies, has extended, theoretically founded general knowledge related to statistical methods used in process control and product control [P6S_WG_16]
3. Student has knowledge of quality management including quality management standards, principles, methods and supporting tools [P6S_WK_02]

Skills

1. Student uses norms and standards adequately to the given task in the field of quality management [P6S_UW_08]
2. Student can effectively use to solve simple problems in the field of machine construction and operation methods and tools used in quality management taking into account their interdependence as well as organizational, technical and economic conditions [P6S_UW_11; P6S_UW_14; P6S_UW_15]
3. Student can design control activities in relation to selected technological operations and standards for the organization of control activities [P6S_UW_16]

Social competences

1. Student recognizes the cause-and-effect relationship between events / inconsistencies and can rank and prioritize them [P6S_KK_02]
2. Student recognizes the need to work in a team and is able to define tasks related to the implementation of the project [P6S_KO_01]

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Formative assessment:

- a) tutorials: assessment of current progress of task implementation
- b) lectures: answers to questions about the content of previous lectures,

c) project: evaluation of the current progress of the project task implementation.

Summative rating:

a) tutorials: presentation of reports on exercises performed (arithmetic average of partial grades);

b) lectures: The pass a test questions, scored on a two-point scale of 0, 1. Passing threshold: 50% of the points.

c) Project: project task and presentation

Programme content

Lecture:

Basic concepts related to quality, product quality features, quality engineering in product design, manufacture, operation and utilization, quality assessment and analysis, quality control and control, tools and methods of quality control and SKO and SPC control, visualization tools, determining causes and effects and determining the importance of problems affecting product quality. Quality management principles, norms and standards

Exercises:

Tools used to visualize quality problems: flowchart, flowchart, process map, control sheet - examples. Tools used to identify the causes and effects of quality problems: Ishikawa diagram, relationship diagram, matrix diagram - examples. Tools used to determine the importance of problems with quality, e.g. the Pareto-Lorentz diagram.

Project

Quality planning - quality plans, standards for implementing technical control

Teaching methods

1. Lecture: multimedia presentation, illustrated with examples on the board.
2. Tutorials: multimedia presentation illustrated with examples given on a blackboard and performance of tasks given by the teacher - practical exercises.
3. Project: project task and presentation

Additional

ISO 9001:2015 - Quality management systems — Requirements

Jasiulewicz-Kaczmarek M., ISO 9000:2015 quality management principles as the framework for a maintenance management, 2016 DOI: 10.21008/j.0239-9415.2016.069.05

Breakdown of average student's workload

	Hours	ECTS
Total workload	100	4,0
Classes requiring direct contact with the teacher	50	2,0
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests, project preparation) ¹	50	2,0

¹ delete or add other activities as appropriate
