Lecturers

Responsible for the course/lecturer:

prof. dr hab. inż. Adam Voelkel

Responsible for the course/lecturer:

Prerequisites

solid state chemistry, physical chemistry – properties of surface layer, instrumental chemistry; can use basic laboratory techniques in synthesis, modification, separation and cleaning of compounds and materials, can use instrumental methods in characterization of materials

Course objective

The aim of this course is to acquaint students with the biomaterials science as the fascinating field of modern engineering. This discipline from the boarder of several sciences including chemistry, physics,

biology, medicine materials engineering, mechanics and ethics. Students should gain the skills in the range of modification of biomaterials as well as their characterization.

Course-related learning outcomes

Knowledge

1. has the knowledge on techniques and methods of characterization of biomaterials - [K_W03,K_W08]
2. can describe methods, techniques, tools and materials used in the solution of simple problems connected with manufacturing and examination of biomaterials - [K_W04, K_W06, K_W07]

Skills

1. can select methods for the basic ways of characterization of biomaterials - [K_U11, K_U16, K_U20]
2. can estimate usefulness and select the tools (methods) for the solution problem in the field of biomaterials application - [K_U09]
3. Student can discuss biomaterial problems in English - [K_U03]

Social competences

1. Student understands the need to supplement her/his education and increasing professional competences - [K_K01]
2. Student has the awareness to obey the engineer ethic rules. - [K_K02, K_K05]
3. Student can act and cooperate in the group accepting different roles. - [K_K03]

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Final written control following lectures. In case of stationary work 5-10 open questions. In case of on-line work through eKursy 5-10 open questions.

permanent control during laboratory classes

Programme content

The following problems will be presented and discussed: general characteristic of biomaterials. Biomaterials as replacements of body parts or taking over its functions. Classification of biomaterials basing on chemical character and structure: metallic, polymers (biopolymers), composites and ceramics. Preparation of different groups of biomaterials. Criteria of the selection of biomaterials. Ceramic biomaterials including calcium phosphate based biomaterials. Methods of characterization of biomaterials. Mechanical properties of biomaterials. Physicochemical properties of biomaterials. Application of biomaterials.
