

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Fundamentals of signal, systems and information theory

Course

Field of study

Engineering Management

Area of study (specialization)

Level of study

First-cycle studies

Form of study

part-time

Year/Semester

3/5

Profile of study

general academic

Course offered in

Polish

Requirements

elective

Number of hours

Lecture

12

Laboratory classes

10

Other (e.g. online)

Tutorials

Projects/seminars

Number of credit points

2

Lecturers

Responsible for the course/lecturer:

Ph.D., Eng., Tomasz Marciniak

Responsible for the course/lecturer:

Mail to: tomasz.marciniak@put.poznan.pl

Phone: 61 647 5935

Faculty of Control, Robotics and Electrical
Engineering

ul. Jana Pawła II 24, 60-965 Poznań

Prerequisites

Knowledge: Basic issues of algebra, probability theory, computer science, information technologies.

Skills: Basic ability to conduct computer calculations and simulations.

Social competences: Student is aware of the importance of the engineer's knowledge of digital signal processing algorithms in modern ICT systems.

Course objective

Introduction to the basics of recording, conversion and analysis of digital signals.

Course-related learning outcomes

Knowledge

The student discusses the parameters of deterministic and random signals, the process of discretizing analog signals, and the frequency analysis of signals [P6S_WG_16].

The student describes DFT (Discrete Fourier Transform) and FFT (Fast Fourier Transform) algorithms, the theory of linear systems, and basic concepts of information theory [P6S_WG_17].

Skills

The student applies knowledge of entropy coding, dictionary coding, DCT transformation, lossy compression, and data encryption and correction [P6S_UW_13].

The student designs and analyzes systems and algorithms in the field of signal and system theory, considering technical and computer science aspects [P6S_UW_14].

The student uses tools and techniques to solve practical problems related to signals and systems in the Matlab environment [P6S_UW_15].

Social competences

The student integrates technical knowledge in the process of designing and analyzing telecommunication systems, considering user needs and various systemic aspects [P6S_KO_02].

The student is aware of the impact of telecommunication technologies on the environment and society and assesses their responsibility for decisions made [P6S_KR_01].

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: Final test (45 min). The test consists of 8 test questions and 3 calculation tasks. Passing threshold 50%.

Laboratory: Class reports. Passing threshold 50%.

Programme content

Lecture: parameters of deterministic and random signals, discretization of analog signals, frequency analysis of signals, DFT and FFT algorithms, linear systems, information theory, entropy coding, dictionary coding, DCT transformation, lossy compression, encryption and data correction.

Laboratory: introduction to Matlab environment, sampling and quantization process, signal filtering, lossless coding, lossy coding, data encryption.

Teaching methods

1. Lecture: multimedia presentation
2. Laboratory classes: simulation experiments in the Matlab / Simulink environment.

Bibliography

Basic

1. T. P. Zieliński, Cyfrowe przetwarzanie sygnałów - Od teorii do zastosowań, WKŁ, Warszawa, wydanie 2, 2009
2. S. W. Smith, Cyfrowe przetwarzanie sygnałów - Praktyczny poradnik dla inżynierów i naukowców, Wydawnictwo BTC, Warszawa, 2007
3. T. Marciniak, Przetwarzanie sygnałów i informacji - taskbook, available on-line from the author's website, 2020
4. A. Dąbrowski, P. Figlak, R. Gołębiowski, T. Marciniak, Przetwarzanie sygnałów przy użyciu procesorów sygnałowych, Wydawnictwo PP, Poznań, wydanie 3, 2000.

Additional

1. MitOpenCourseWare, Massachusetts Institute of Technology, <http://ocw.mit.edu/> (courses: 6.011 "Introduction to Communication, Control, and Signal Processing", 6.003 "Signals and Systems").
2. A. Przelaskowski, Kompresja danych. Podstawy. Metody bezstratne. Kodery obrazów, Wydawnictwo BTC, 2005.

Breakdown of average student's workload

	Hours	ECTS
Total workload	50	2,0
Classes requiring direct contact with the teacher	25	1,0
Student's own work (literature studies, preparation for laboratory classes, preparation for tests, preparation of laboratory reports) ¹	25	1,0

¹ delete or add other activities as appropriate
