

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Machines' construction and operation

Course

Field of study

Logistics

Area of study (specialization)

Level of study

First-cycle studies

Form of study

part-time

Year/Semester

2/4

Profile of study

general academic

Course offered in

Polish

Requirements

elective

Number of hours

Lecture

8

Tutorials

Laboratory classes

8

Projects/seminars

Other (e.g. online)

Number of credit points

2

Lecturers

Responsible for the course/lecturer:

Ph.D., Eng. Dominik Wilczyński

Mail to: dominik.wilczynski@put.poznan.pl

Phone: 61 224 45 12

Faculty of Mechanical Engineering

ul. Piotrowo 3, 61-138 Poznań

Responsible for the course/lecturer:

Ph.D., Eng. Dominik Wojtkowiak

Mail to: dominik.wojtkowiak@put.poznan.pl

Phone: 61 224 45 16

Faculty of Mechanical Engineering

ul. Piotrowo 3, 61-138 Poznań

Prerequisites

The student starting this course should have basic knowledge of technical drawing, strength of materials

and technical mechanics. He should also have the ability to obtain information from the indicated sources and be ready to cooperate as part of the team.

Course objective

Understanding the structure and elements of the mechatronic system. Acquiring the skills of an interdisciplinary approach to issues related to machine design.

Course-related learning outcomes

Knowledge

1. Student knows the basic issues of construction, technology and techniques related to design and production [P6S_WG_01]
2. Student knows the basic issues of mechanics, design and operation of machines [P6S_WG_02]

Skills

1. Student potrafi zastosować do rozwiązania problemu właściwe techniki eksperymentalne i pomiarowe w tym również symulację komputerową w ramach budowy i eksploatacji maszyn [P6S_UW_03]
2. Student potrafi dobrać właściwe narzędzia i metody rozwiązania problemu mieszczącego się w ramach konstrukcji i technologii, a także skutecznie się nimi posługiwać [P6S_UO_02]
3. Student potrafi identyfikować zmiany wymagań, standardów, przepisów, postępu technicznego i rzeczywistości rynku pracy w kontekście maszyn technologicznych, i na ich podstawie określać potrzeby uzupełniania wiedzy [P6S_UU_01]

Social competences

1. Student is aware of initiating activities related to the formulation and transfer of information and cooperation in society in the area of machine technology in logistics [P6S_KO_02]
2. Student is aware of cooperation and team work to solve problems within the area of technique and technology [P6S_KR_02]

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: The knowledge acquired during the lecture is verified by one 60-minute test carried out during the 15th lecture. The test consists of 5 open-ended questions with different scores. Passing threshold: 50% of points.

Laboratory: Final test: open questions. Passing threshold: 50% of points.

Programme content

Lecture: Machine construction process, computer aided design. The essence of the mechatronic system, the basic elements of the system. Construction of actuators, sensors, their functions and selection principles. Structure of the design and construction process of the mechatronic device. Stages of mechatronic design. Design assumptions, system modeling, principles of designing mechanical,

electronic and control systems, selection and construction of components. Examples of mechatronic constructions. Selection of components from catalogs. Application of computer simulation in design. Preparation of mechatronic equipment documentation.

Laboratory: Designing of mechanical systems, selection and construction of components. Selection of components from catalogs. Application of computer simulation in design. Preparation of mechatronic equipment documentation.

Teaching methods

Lecture: information lecture, problem lecture, talk.

Laboratory: practical method — laboratory exercises.

Bibliography

Basic

1. Osiński Z., Podstawy konstrukcji maszyn, PWN, Warszawa, 1999.
2. Heimann B., Gerth W., Popp K., Mechatronika. Komponenty. Metody. Przykłady, PWN, Warszawa 2001.
3. Gawrysiak M., Analiza systemowa urządzenia mechatronicznego, Wydawnictwo Politechniki Białostockiej, Białystok 1997.
4. Skrzyszowski Z., Podnośniki i prasy śrubowe PKM – projektowanie, Politechnika Krakowska, Kraków 2005.

Additional

1. Uhl T., Projektowanie mechatroniczne zagadnienia wybrane, Publisher, Kraków 2007.
2. Kurmaz L., Projektowanie węzłów i części maszyn, Politechnika Świętokrzyska, Kielce 2004.
3. Juchnikowski W., Żółtowski J., Podstawy Konstrukcji Maszyn – pomoce do projektowania z atlasem, Politechnika Warszawska, Warszawa 2004.

Breakdown of average student's workload

	Hours	ECTS
Total workload	50	2,0
Classes requiring direct contact with the teacher	16	1,0
Student's own work (literature studies, preparation for laboratory classes, preparation for tests) ¹	34	1,0

¹ delete or add other activities as appropriate
