

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Production management

Course

Field of study

Logistics

Area of study (specialization)

Level of study

First-cycle studies

Form of study

part-time

Year/Semester

3/6

Profile of study

general academic

Course offered in

Polish

Requirements

compulsory

Number of hours

Lecture

16

Tutorials

18

Laboratory classes

8

Projects/seminars

Other (e.g. online)

Number of credit points

5

Lecturers

Responsible for the course/lecturer:

Ph.D., Eng. Agnieszka Grzelczak

Responsible for the course/lecturer:

Mail to: agnieszka.grzelczak@put.poznan.pl

Faculty of Engineering Management

ul. J. Rychlewskiego 2, 60-965 Poznań

Prerequisites

The student starting this subject should have a basic knowledge of machine technology as well as the

basics of management and logistics. He should also have the skills to understand and apply the parametric description of the production process and system as well as the design of workstation organization, as well as understand and be prepared for production management, especially in the area of production organization design, and in the field of social competence should have the ability to work in a group.

Course objective

To familiarize students with the basics of production and service management.

Course-related learning outcomes

Knowledge

1. Student knows basic issues in the field of production management [P6S_WG_08]
2. Student knows the basic relations between the technical and economic spheres characteristic of production management [P6S_WK_01]
3. Student knows the basic phenomena and contemporary trends in production management and its connections with logistics [P6S_WK_05]
4. Student knows the basic methods, techniques, tools and materials used to solve simple engineering tasks in the field of designing systems and production processes in the context of logistics [P6S_WK_07]

Skills

1. Student is able to notice systemic and non-technical, as well as socio-technical, organizational and economic aspects in engineering tasks [P6S_UW_04]
2. Student is able to design an object, system or production process using appropriate methods and techniques [P6S_UW_07]
3. Student is able to identify and formulate design (engineering) tasks of a practical nature, characteristic of production management [P6S_UO_01]
4. Student is able to select appropriate tools and methods for solving a problem within the scope of production management, as well as use them effectively [P6S_UO_02]

Social competences

1. Student is able to plan and manage in an entrepreneurial manner [P6S_KO_01]
2. Student is aware of the responsible filling, correct identification and resolution of dilemmas related to the profession of logistics [P6S_KR_01]
3. Student is aware of cooperation and group work on solving problems within the scope of logistics and production management [P6S_KR_02]

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: The knowledge acquired during the lectures is verified by the college at the last class and / or through tests (quizzes) at individual classes (via the Moodle platform). Passing threshold: 50% of points.

Classes: The skills acquired during the classes are verified by the test during the last class and activity during the classes. The test consists of tasks (open and computational). Passing threshold: 50% of points.

Laboratory: The skills acquired during the laboratory classes are verified on the basis of the cognitive-practical assessment of the project using simulation methods, its defense or written answer, as well as the student's activity. Passing threshold: 50% of points.

Programme content

Lecture: The essence of production management. Basic concepts for production management. Production management parameters and norms. Modeling space of the production process, control planes. Product (product or service), simple and complex product, production range. Series and production batch. Production program. Time Fund. Production pace and tact. Production cycle of a simple and complex product. Production capacity, load balancing with production capacity. Managing production capacity, scheduling, production flow analysis.

Classes: Production management parameters and norms. Product, production range. Product structure, product specification. Series and production batch. Production program. Time Fund. Production pace and tact. Production cycle of a simple and complex product. Balancing production possibilities.

Laboratory: Analysis of the product range, structure and specifications of finished products. Technological cards and executive (workplace) instructions. Cyclograms. Analysis of production processes. Analysis of the possibility of implementing improvements in production processes (Lean Management). Production process simulations. Technological calculations (pace, tact, OEE indicator, etc.).

Teaching methods

789 / 5 000

Wyniki tłumaczenia

Lecture: informative (conventional) lecture - providing information in a structured way, supported by a multimedia presentation, illustrated with examples and tasks, and the case study method - analysis of specific illustrative (illustrative) or problematic (problem identification) cases.

Exercises: exercise method (subject exercises) - in the form of auditorium exercises, the application of the acquired knowledge in practice may take various forms: solving cognitive tasks or training psychomotor skills, transforming a conscious activity into a habit through repetition.

Laboratory: independent simulation of the production process with the use of specialized software or during workshops.

Remote learning methods indicated on the ekursy.put.poznan.pl platform.
