

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Introduction to technology and Industry of the future

Course

Field of study

Logistic

Area of study (specialization)

Level of study

First-cycle studies

Form of study

full-time

Year/Semester

1/1

Profile of study

general academic

Course offered in

Polish

Requirements

compulsory

Number of hours

Lecture

30

Laboratory classes

Other (e.g. online)

Tutorials

15

Projects/seminars

Number of credit points

4

Lecturers

Responsible for the course/lecturer:

Ph.D.,D.Sc.,Eng. Marcin Butlewski, University

Professor

Responsible for the course/lecturer:

Mail to: marcin.butlewski@put.poznan.pl

Phone: 61 665 33 77

Faculty of Engineering Management

ul. J. Rychlewskiego 2, 60-965 Poznań

Prerequisites

Knowledge of mathematics and physics in middle school. Ability to solve simple problems in mathematics and physics. Group work, interest in technology.

Course objective

To familiarize students with the basic problems associated with the development of technology, make aware of the logic of changes in manufacturing techniques and human relationships with technology and the environment. The systemic nature of these compounds is emphasized. Familiarizing students with modern trends in the development of technology and technology as well as the organization of

human work aims to develop practical skills in identifying, understanding and describing contemporary techniques and technologies used in industry and services.

Course-related learning outcomes

Knowledge

1. Student knows basic issues of construction, technology and modern manufacturing technology related to logistics [P6S_WG_01].
2. Student knows basic issues of mechanics, construction and operation of machines and machine tools related to production logistics [P6S_WG_02].

Skills

1. Student is able to apply to solve a problem falling within the scope of general technical problems, as well as appropriate experimental and measurement techniques, including computer simulation, to solve basic problems within logistics and its specific issues, as well as supply chain management [P6S_UW_03].
2. Student is able to assess and analyse critically in terms of economics a selected general technical problem within the production logistics and its specific issues [P6S_UW_06].
3. Student is able to identify changes in requirements, standards, regulations, technical progress and the reality of modern production systems, and on their basis identify needs to supplement knowledge [P6S_UU_01].

Social competences

1. Student is aware of initiating activities related to the formulation and communication of information and interaction in society in the field of production logistics and contemporary manufacturing [P6S_KO_02].

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: Knowledge acquired on lectures is verified by two 45-minute examinations realized on 7 and 15 lecture. Each examination consists with 10-15 questions (closed and open), estimated differently.

Threshold attest: 50% points.

Tutorials: Attest examination: oral answers, open questions, multi-choice test and activity on tutorials.

Threshold attest: 50% points.

Programme content

Lecture: Elements of the history of technology against the background of human evolution and the development of societies. Determinants of successive technological revolutions. Techniques and technologies concerning materials (e.g. metal working, casting, machining, heat and thermo-chemical treatment) and conditions of their implementation from the point of view of priorities of stages of industry development. Connections used in machine construction, principles of construction and operation of machine components (bearings, gears, couplings, brakes). Techniques and technologies in production and distribution, transport and other logistic processes. Selected problems of contemporary

technical civilization. Ethical problems of the user and creator of technology in the face of modern means of technology. Modern methods of production and division of responsibility in automated production systems. Basic features of cyber-physical systems.

Tutorials: Accounting and designing exercises on topics related to lectures.

Teaching methods

Lecture: Lectures with multimedia presentation.

Tutorials: exercise method, accounting and design tasks.

Breakdown of average student's workload

	Hours	ECTS
Total workload	100	4,0
Classes requiring direct contact with the teacher	45	2,0
Student's own work (literature studies, preparation for tutorials, preparation for tests) ¹	55	2,0

¹ delete or add other activities as appropriate
