

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

COURSE DESCRIPTION CARD - SYLLABUS

| Course name | | | |
|--------------------------------------|-----------------------------------|---|--|
| Strength of materials | | | |
| Course | | | |
| Field of study | | Year/Semester | |
| Aviation | | 2/3 | |
| Area of study (specialization) | | Profile of study | |
| | | general academic | |
| Level of study | | Course offered in | |
| First-cycle studies Form of study | | Polish Requirements | |
| | | | |
| Number of hours | | | |
| Lecture | Laboratory classes | Other (e.g. online) | |
| 15 | 15 | | |
| Tutorials | Projects/seminars | | |
| 15 | | | |
| Number of credit points | | | |
| 3 | | | |
| Lecturers | | | |
| Responsible for the course/lect | urer: Respon | sible for the course/lecturer: | |
| dr inż. Piotr Stasiewicz | | | |
| email: piotr.stasiewicz@put.po | znan.pl | | |
| tel. 61 665 2044 | | | |
| Wydział Inżynierii Mechaniczne | j | | |
| ul. Piotrowo 3, 60-965 Poznań | | | |
| Prerequisites | | | |
| Solving basic problems of techn | nical mechanics. | | |
| Solving basic tasks in geometry | and mathematical analysis. | | |
| Ability to search for necessary i | nformation in literature, databas | ses, catalogues. The ability to self-study. | |
| Using information and commur | nication techniques appropriate t | to carry out engineering tasks. | |
| Course objective | | | |
| Introduction to the basic princi | ples of mechanics of deformable | bodies. | |

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

Course-related learning outcomes

Knowledge

1. has extended knowledge in the field of material strength, including the theory of elasticity and plasticity, stress hypotheses, methods of calculating beams, membranes, shafts, joints and other structural elements, as well as methods of testing the strength of materials and the state of deformation and stress in structures, and has basic knowledge of the main departments of technical mechanics: statics, kinematics and dynamics of a material point and a rigid bodyas methods for testing strength of materials and the state of deformation and stress in structures.

Skills

1. can analyze objects and technical solutions, can search in catalogs and on manufacturers' websites, ready components of machines and devices, including means and devices, assess their suitability for use in their own technical and organizational projects 2. Can use mobile engineering applications, formulas and strength tables.

2. can use the mathematics (differential and integral calculus) to describe simple engineering problems.

Social competences

1. is aware of the social role of a technical university graduate, in particular understands the need to formulate and provide the society, in an appropriate form, with information and opinions on engineering activities, technological achievements, as well as the achievements and traditions of the engineer profession2. Understands the need for lifelong learning.

2. correctly identifies and resolves dilemmas related to the profession of an aerospace engineer

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture, tutorials - written test and assessment of activity in the classroom:

3 50.1% -70.00%

4 70.1% -90.0%

5 from 90.1%

Laboratory classes - ongoing control of theoretical preparation for classes, discussion of results, substantive assessment of test reports.

Programme content

Classification of loads acting on an elastically deformable body, stresses and internal forces. Internal forces in the bar.

Tests of mechanical properties of materials.

Tension and compression. Strength conditions, generalized Hooke's law.

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

Tension and compression within the limits of elasticity, the statically determinate bar systems.

Stress Analysis, plane stress. Transformation formulas and main stresses.

Strength theories.

Moments of inertia of flat figures.

Torsion of round bars.

Graphs of bending moments and shear forces. Bending of beams.

Normal stresses in beams.

Beam Design. Differential equation for beam deflection lines and beam deflection lines.

Oblique bending.

Bars and beams subject to combined loadings. Simultaneous stretching or compression with bending, core cross-section. Bending with torsion.

PART - 66 (THEORY - 22.5 hours, PRACTICE - 11.25 hours)

MODULE 6. MATERIALS AND EQUIPMENT

6.1 Aircraft construction materials containing iron

b) Testing iron-containing materials for hardness, strength

tensile strength, fatigue strength and impact strength. [1]

Teaching methods

Live lecture with multimedia illustrations, tutorials with problems solved on the board, laboratories - measurements performed by students under the supervision of a teacher.

Bibliography

Basic

1. J. Zielnica, Wytrzymałość materiałów, str. 554, WPP, wyd. III, Poznań 2000

2. Z. Dyląg, A. Jakubowicz, Z. Orłoś, Wytrzymałość materiałów, WNT, Warszawa, 2012

3. K. Magnucki, W. Szyc, Wytrzymałość materiałów w zadaniach, PWN, 1987

Additional

- 1. N. Willems, T. J. Easley, S. T. Rolfe, Strength of Materials, Mc Graw-Hill Book Company, 1981
- 2. M. Gere, S. Timoshenko, Mechanics of Materials, PWS-Kent Publishing Company, Bos-ton, 1984

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

Breakdown of average student's workload

| | Hours | ECTS |
|---|-------|------|
| Total workload | 75 | 3,0 |
| Classes requiring direct contact with the teacher | 47 | 2,0 |
| Student's own work (literature studies, preparation for | 28 | 1,0 |
| laboratory classes/tutorials, preparation for tests) | | |

¹ delete or add other activities as appropriate
