

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Industrial application of selected biomolecules [S1IFar1>WwPWB]

Course

Field of study

Pharmaceutical Engineering

Year/Semester

2/3

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

polish

Form of study

full-time

Requirements

elective

Number of hours

Lecture

0

Laboratory classes

0

Other (e.g. online)

0

Tutorials

15

Projects/seminars

0

Number of credit points

1,00

Coordinators

dr hab. inż. Katarzyna Materna prof. PP
katarzyna.materna@put.poznan.pl

Lecturers

Prerequisites

Student will gain well-ordered and theoretically grounded knowledge of key issues of organic chemistry. Student is able to solve elementary problems of organic chemistry on the basis of possessed knowledge, the ability to acquire information from indicated sources in Polish and foreign language. Student understands the need of further education, the necessity of broadening his/her competence, readiness to cooperate within a team.

Course objective

The course covers basic information about organic compounds of natural origin, characterized by biological activity. The course aims to familiarize students with the occurrence and biological significance of selected compounds of plant and animal origin, which are used in pharmacology, medicine, food and cosmetics.

Course-related learning outcomes

Knowledge:

1. student has a well-ordered, theoretically grounded general knowledge of organic and bioorganic chemistry related with bioactive substances [k_w1].
2. student has knowledge of natural and synthetic raw materials, products and processes used in

pharmaceutical industry [k_w13].

Skills:

1. student is able to prepare and present an oral presentation on detailed issues of pharmaceutical engineering [k_u6].
2. student has the ability of self-education [k_u24].

Social competences:

1. student is ready to critically evaluate his/her knowledge, understands the need for further education, complementing the field knowledge and improving his/her professional, personal and social competences, understands the importance of knowledge in problem solving and is ready to consult experts [k_k1].
2. student is ready to critically evaluate own and team actions, and is able to cooperate and work in a group [k_k2].

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

Current control during class, evaluation of prepared multimedia presentations and participation in class discussions;

assessment criteria: 3 - basic theoretical preparation and moderate participation in discussion; 4 - preparation for classes supported by theoretical knowledge, ability to formulate conclusions and active participation in discussion during classes; 5 - very good preparation for classes, ability to formulate own opinions and conclusions during discussion, independent search for additional theoretical knowledge concerning discussed issues.

Programme content

1. Plant primary and secondary metabolites.
2. Methods of isolating organic compounds from plant products.
3. Application of bioactive compounds in cosmetics, pharmacy, medicine and food industry (bioactive components of food products, uniqueness of aromatic substances, bee products in medicine and cosmetology, natural emulsifiers).
4. Selected components of animal origin in cosmetics: chitosan, elastin, keratin, collagen, lanolin, beeswax, sodium salt of animal fat (soaps).
5. Bioactive substances found in foods: L-carnitine, taurine, carnosine, anserine, creatine, coenzyme Q10, glutathione, conjugated linoleic acid (CLA), bioactive peptides, ovoalbumin, conalbumin, ovomucin, cystatin.
6. Phytoestrogens. Biological activity. Application in dietary supplements.
7. Pharmacological significance of tannins, coumarins and glycosides.
8. Genetically modified plants. Increasing the content of bioactive compounds.

Teaching methods

Overview of the issues with the use of multimedia presentations, discussion.

Bibliography

Basic

1. Z.E. Sikorski (red.), Chemia żywności, WNT, Warszawa, 2012.
2. Z.E. Sikorski, H. Staroszczyk, Chemia żywności, PWN, Warszawa, 2017.
3. A. Kołodziejczyk, Naturalne związki organiczne, PWN, Warszawa, 2013.
4. R.B. Silverman, Chemia organiczna w projektowaniu leków, WNT, Warszawa, 2004.
5. P. Kafarski, B. Lejczak, Chemia bioorganiczna, PWN, Warszawa, 1994.
6. G.L. Patrick, Chemia medyczna, PWN, Warszawa, 2019.

Additional

1. M. Molski, Nowoczesna kosmetologia, PWN, Warszawa, 2014.
2. K. Kacprzak, K. Gawronska, Chemia kosmetyczna, Wydawnictwo Naukowe UAM, Poznań, 2010.
3. Rzemieniecki T., Gwiazdowska D., Rybak K., Materna K., Jus K., Pernak J. (2019) Synthesis, Properties, and Antimicrobial Activity of 1-Alkyl-4-hydroxy-1-methylpiperidinium Ionic Liquids with Mandelate

Breakdown of average student's workload

	Hours	ECTS
Total workload	25	1,00
Classes requiring direct contact with the teacher	15	0,50
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	10	0,50
