

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Statistics [S1Lot1>Stat/Prob]

Course

Field of study

Aviation

Year/Semester

1/1

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

polish

Form of study

full-time

Requirements

compulsory

Number of hours

Lecture

15

Laboratory classes

0

Other (e.g. online)

0

Tutorials

15

Projects/seminars

0

Number of credit points

2,00

Coordinators

dr Ewa Bakinowska

ewa.bakinowska@put.poznan.pl

Lecturers

dr Ewa Bakinowska

ewa.bakinowska@put.poznan.pl

mgr Mateusz John

mateusz.john@put.poznan.pl

mgr inż. Marta Kańczurzevska

marta.kanczurzevska@put.poznan.pl

Prerequisites

The student has basic knowledge of combinatorics and theory of probability resulting from the school program. The student has basic knowledge of mathematical analysis (differential calculus of functions of one variable, integral calculus of functions of one variable and basics of matrix algebra). He can think logically. The student is aware of the learning purpose. The student is able to apply the language of mathematics (differential and integral calculus) to describe simple problems in technology. Is able to obtain information from literature.

Course objective

The aim of the course is to familiarize students with the basic issues of statistics in order to solve simple practical problems.

Course-related learning outcomes

none

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: Assessment of knowledge and skills acquired during the lecture is verified on the basis of a written test.

Tutorials: The assessment of knowledge and skills acquired in tutorials is verified on the basis of written tests.

Programme content

LECTURE

1. Probability space.
2. Axiomatic definition of probability, classical probability.
3. Conditional probability.
4. Discrete random variable.
5. Continuous random variable.
6. Elements of descriptive statistics.
7. Covariance of sample and sample linear correlation coefficient.
8. Point estimation.
9. Confidence intervals.
10. Tests of significance for one population
11. Linear regression.

Tutorials:

1. Conditional probability.
2. Discrete random variable.
3. Continuous random variable.
4. Elements of descriptive statistics.
5. Covariance of sample and sample linear correlation coefficient.
6. Point estimation.
7. Confidence intervals.
8. Tests of significance for one population,
9. Linear regression.

Teaching methods

Interactive lecture with the formulation of current questions for a group of students. Students actively participate in the lecture. Each presentation of a new topic is preceded by a reminder of the content related to the discussed issue (e.g. content known to students from other subjects). The main content of each lecture is posted on eCourses.

Tutorials: Students are given problems to be solved during tutorials. The needed theory, formulas and graphs are made available to students. The tasks are solved together with the teacher with the active participation of students.

Bibliography

- Basic 1. D. Bobrowski, (1986) Probabilistyka w zastosowaniach technicznych, Wydawnictwo Naukowo Techniczne.
2. D. Bobrowski, K. Maćkowiak-Łybacka, (2006) Wybrane metody wnioskowania statystycznego, Wydawnictwo Politechniki Poznańskiej.
3. J. Koronacki, J. Melniczuk (2001) Statystyka dla studentów kierunków technicznych i przyrodniczych. WNT, Warszawa.

Breakdown of average student's workload

	Hours	ECTS
Total workload	50	2,00
Classes requiring direct contact with the teacher	30	1,50
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	20	0,50
