

BETWEEN
THE RIVERSIDES

BETWEEN THE RIVERSIDES

What was previously a large, unused space is now becoming a new, inviting public space. Between the two sides of the river project is a green pocket located near to the Ostrów Tumski in Poznań. Bridges connects densely built-up area with the old harbour. Main aim is to create a triangle spots for people to escape from urban chaos. It encourages to gather around and engage in a dialogue. Between the two sides of the river and between other people is the most important thought of the design.
