

Position: PhD-student

Requirements:

We are looking for a brilliant PhD candidate in a new project BioMINE in which we also aim at development of an innovative in-situ recovery system for fermentation products.

It is expected that the candidate will have:

- MSc or MSc in Eng in one of the followings: chemistry, chemical technology, environmental engineering, environmental biotechnology, industrial biotechnology, biochemistry, microbiology or similar (relevant to the topic of the project)
- Basic experience in process/chemical engineering and extraction processes
- It is not necessary but it would be advantageous: experience in liquid-liquid extraction, experience in working in research projects and in working in analytical, chemical or biotechnological laboratory, co-authorship in scientific paper(s)
- Ability to learn new techniques and to work in a research team
- Proficiency in English in writing and speaking

Description of tasks:

A PhD student will be responsible for:

- planning and running extraction trials
- analyzing the data and drafting manuscripts for international research journals
- presenting results at the conferences
- closely collaborating with all members of the research group

NCN call type: OPUS

Deadline for submission of applications: 24 czerwca 2022, 23:59
